

A secured end-to-end clinic platform built for doctors

CLINIC ASSIST SOFTWARE

Clinic Assist is a cloud-based software solution for medical and dental clinics. It is owned by Assurance Technology Pte Ltd, a private company established in 1995. The solution is designed to help clinics reach new levels of efficiency, accuracy and patient care.

Driven by the belief in empowering the relationship between people and technology, new technologies are constantly adopted to transform the way clinical information is managed to improve the quality of service delivery.

GP, Specialists and Dentists are medical experts who play different roles and provide distinctly different services. The nature of their practice, workflow, consultation, treatments and advices are different. Through our in-depth study and communication with them over the years, we have adjusted our software into versions to cater to their individual needs.

More than 1,000 clinics in Singapore are empowered by Clinic Assist.

WHAT WE OFFER

Clinic Assist is a comprehensive solution that digitize your clinic processes and enable you to operate a paperless clinic with ease.

Pre-Consultation: Online appointment booking, pre-registration, appointment reminder, patient self-registration, digital consent forms & financial counselling, triage.
