

A clear overview of your Microsoft 365 environment

Are you sure you have the correct configuration and settings for your Microsoft 365 environment and that they are based on best practice? Do you know how to utilize the functionality available regarding e.g. security? If the answer is no to any of those questions, the Atea M365 Healthcheck is the right thing for you.

Atea M365 Healthcheck will help you analyze a variety of settings in your configuration and walk you through your Microsoft 365 environment. After completing the analysis, you will receive a report with statistics and recommendations. The report also contains a detailed picture of your environment and how the existing configuration relates to Atea's best practice.

Atea's experts will give you recommendations regarding configuration changes to ensure that your environment is optimally configured.

The report covers the following parts of the Microsoft 365 environment:

- Azure AD
- Exchange Online
- Collaboration (SharePoint, OneDrive and Teams)

Further information

If you want to know more about Atea M365 Healthcheck, please contact your local Atea office or representative.

WHAT IS INCLUDED IN THE ATEA M365 HEALTHCHECK?

Atea performs an inventory and collects information about your environment.

Based on the inventory, a report is created with statistics about the status of your environment. Based on this, Atea gives you recommendations about possible changes.

Atea will go through the report together with you and establish a plan for how to ensure that your environment can be better and safer than before.
