CloudTrack Migration

Move on from outdated and increasingly inefficient legacy infrastructures

With access to the cloud comes agility & flexibility

Why?

Many organizations are moving their IT resources and applications to the public cloud to gain agility, reliability, flexibility, and scalability and cost control. However, moving applications to the cloud might encounter difficulties because of application dependencies, infrastructure complexities and failing to map existing solutions and environments to correct cloud services.

How?

By running pre-defined workshops, Atea will help your organization understand the required aspects when migrating IT resources and applications to the cloud. Together with the customer, Atea will run the migration journey in three stages:

1. Introduction Session
2. Technical Session
3. Follow up Technical Session

The (1.) Introduction phase will handle high-level migration project timeline, setup of migration steering group, solution assessment setup and review of the assessment report. The (2.) Technical Session will cover application discovery, dependency mapping, different migration possibilities and techniques, availability and critical technical requirements. For the (3.) Follow-up Technical Session, there will be given a walkthrough of the architectural design proposition and the digital foundations for a successful migration. The delivery includes migration of one workload candidate to confirm Atea's recommendations and best practices.

What?

Atea have the expertise and best practices to help your organization achieve a successful cloud migration journey. Atea's solution advisors and consultants will help your organization set up a comprehensive migration roadmap that structures the priorities and activities. They will also help define which resources and applications that needs to be re-architected, re-purchased, re-hosted, re-platformed, relocated, retained or even retired – and at which time. With certified consultants on Microsoft Azure, Amazon Web Services and Google Cloud Platform, Atea can assist whether your organization have a single- or a multi-cloud approach.

Value

Atea CloudTrack Migration helps your organization achieve:

- Reduced "time-to-market" by migrating applications and data in an effective manner to value added cloud services.

- Greater predictability by using tools and best practices for migration that gives better insight and decision support to avoid spending time and resources on failing migration projects.

- Reduced risk by building a solid technical foundation on your cloud platform of choice.
