Copilot Maturity Assessment

Your next step toward secure, scalable AI adoption with Microsoft 365

Generative AI is transforming how people work - helping teams save time, reduce manual tasks, and make better decisions. But to realise these benefits, your organisation needs to be ready: technically, culturally, and strategically.

The Copilot Maturity Assessment is designed to help you move from understanding the potential of AI to preparing your organisation for successful adoption. Whether you're just starting out or already exploring Copilot capabilities, our structured four-step approach ensures you're ready, technically and strategically, to unlock real business value.

Why readiness matters?

Copilot is only as powerful as the environment it runs in. Without the right foundations, secure data, clear use cases, and stakeholder buy-in, AI adoption can stall. Our assessment helps you;

- Accelerate Copilot deployment with confidence.
- Reduce risk by ensuring secure, compliant implementation.
- Align AI capabilities with real business needs.
- Empower your teams to work smarter, not hard.

What will I get?

Atech's **Copilot Maturity Assessment** helps you understand where you are today and what steps to take next. This engagement provides:

- A clear report on your organisation's maturity for Microsoft 365 Copilot.
- Insights into technical requirements to ensure your data is secure and AI-ready.
- Identification of key business stakeholders and high-impact use cases.
- Recommended next steps for technical enablement and user adoption.

> Atech combines deep Microsoft expertise with a proven AI enablement framework.
> **Let's get your organisation ready to unlock the full value of Copilot.**

How does it work?

We follow a structured, four-step process to assess your organisation's maturity and guide your next steps:

Define Use Cases
We work with you to identify where Copilot can deliver the most value - whether its helping sales teams respond faster to customers, enabling finance to automate reporting, or supporting HR with policy drafting.

Identify Stakeholders
Success with Copilot isn't just about IT. We help you find the champions across your business who can drive adoption and maximise impact.

Assess Technical Maturity
We review your Microsoft 365 environment against key areas of the Zero Trust framework to ensure your data is protected and your setup supports secure AI deployment.

Recommend Next Steps
You'll receive a tailored roadmap covering both technical enablement and change management, helping you move confidently toward Copilot adoption.
