

Advanced Security for SMB

Enterprise-grade Microsoft security for SMBs, protecting users, data and AI adoption without complexity or costs.

Small and mid-sized businesses face the same cyber threats as large enterprises—but without the resources, budget, or specialist teams to keep up.

Attacks on SMBs are increasing rapidly, with ransomware, identity compromise and data leakage causing operational downtime, financial loss and long-term reputational damage. At the same time, businesses are adopting cloud services, remote work and AI tools like Copilot, increasing their attack surface and data risk.

Traditional, fragmented security tools are complex to manage and hard to scale. SMBs need enterprise-grade protection that is simple, affordable, and designed for their reality—protecting users, devices and data without adding operational burden.

What Advanced Security for SMB offers:

Advanced Security for SMB is a comprehensive, **Microsoft-first security solution** built on Microsoft 365 Business Premium, Microsoft Defender and Microsoft Purview.

It provides integrated protection across identity, email, endpoints, applications and data—combined with **expert MSP** management and predictable per-user pricing. Security controls are assessed, correctly configured and continuously optimised to ensure customers get **full value** from their **existing licences**.

Advanced threat detection, automated response, data protection and AI-ready governance work together on a single platform. The result is **enterprise-grade security**, compliance-ready controls and **24/7 protection**—delivered in a way that's accessible, manageable and scalable for **growing SMBs**.

Atech Services

We start by understanding your current security posture, then align protection to your business risks and priorities. Whether you need targeted security improvements or fully managed protection, our modular Advanced Security for SMB lets you adopt the right controls, at the right time—without complexity, disruption or overhead.

Advanced Security for SMB at a Glance:

Security Foundations Assessment for SMB

- Assesses Microsoft 365 security against best practices
- Identifies risks with a prioritised remediation roadmap

Security Foundations for SMB

- Establishes MFA, Conditional Access, and Zero Trust access
- Secures and manages devices using Microsoft Intune

Threat Detection for SMB

- Detects identity, endpoint, email, and cloud threats
- Enables automated response with Microsoft Defender

Data Security for SMB

- Discovers and classifies sensitive data in Microsoft 365
- Protects data with labels, DLP, and retention policies

Complete Security for SMB

- Everything in Threat Detection for SMB & Data Security for SMB
- Quickest and most cost-effective way to get Advanced Security

Security Operations for SMB

- Provides 24/7 monitoring and threat response
- Reduces risk through continuous detection and investigation

How We Make A Difference:

Enterprise Security, Simplified – Deliver enterprise-grade Microsoft security tailored for SMBs, without complexity or overhead.

Proactive Threat Protection – Identify, investigate and respond to threats early through continuous monitoring and automated response.

AI-Ready Data Protection – Secure and govern data to enable safe adoption of AI and Microsoft Copilot.

Expert-Led Security Strategy – Apply Microsoft best practices through certified specialists and risk-aligned security roadmaps.

Flexible, Modular Security – Adopt the right level of protection as your business evolves, without disruption.

Trusted Microsoft Partnership – Benefit from deep Microsoft expertise, tooling and security insight.

The Atech Advantage

We are a certified Microsoft partner securing over 50,000 Microsoft 365 users. With deep expertise, access to Microsoft funding, and a full suite of services, we ensure your Microsoft 365 environment is secure, optimised, and aligned to your business goals—from first steps to continuous innovation.
