

# Virtual CIO - Technology Consulting

**We believe that the insights of a CIO should not be restricted to large enterprises and businesses in the technology sector. Every business needs a robust technology strategy to set them up for success.**

Gartner predicts that through 2022, insufficient cloud IaaS skills will delay half of enterprise migrations to the cloud by two years or more, and recommends working with MSP's who have a proven track record.\*

Not a single business has been unaffected by unforeseen events, so the expectations is on technology to help the business weather the storm.

The expectations on IT are evolving from a commodity to an enabler for the business. The business is no longer just running IT functions, but expecting technology investments to deliver ROI continuously and help the business achieve its strategic goals.

Technology leadership and vertical insights lead the business through change with agile systems that are easy to scale up and down as required. There is an opportunity to forge new ways of working and digitally transform to become a leader in your field. It is easy to get buy-in from stakeholders, when the transformation is implemented in phases with a shared IT roadmap which is aligned with strategic business objectives.

**A CIO is key to growing your business. The good news is that you don't have to hire one to benefit from this unique skillset. This is why we have created a service which allows you to accelerate your digital transformation and create the next version of your business.**

## STRATEGIC PLANNING

Your vCIO will work with you to understand your business and technology challenges to form a technology strategy that aligns with what matters most to your business.

## TECHNOLOGY ROADMAP

A technology roadmap will form a 1 to 3-year plan to ensure you have the right tools for your business. Our vCIO will ensure your systems are secure and implemented into your existing technology processes.

## BUDGET OPTIMISATION

Our vCIO will analyse your IT spend to ensure you are investing in the right areas. This process will also find ways to optimise your IT spending to so you gain visibility of consumption and reduce cost whilst improving your systems.

## SECURITY & COMPLIANCE MANAGEMENT

Atech vCIO will keep you aligned with your security and regulatory requirements, including GDPR and CyberSecurity best practices to ensure your IT systems and processes meet standards.

- ✓ Telecommunications
- ✓ Wireless Networks
- ✓ Workstation
- ✓ Suppliers
- ✓ Mobile Device Management

# Talk to us about how we can help your business

## What are the key outputs of the vCIO?

### Phase 1 : Strategy Overview Report

This report will comprise a review of your existing technology estate and processes to identify risks and issues that need to be addressed against Atech's best practice, security and compliance standards.

During the Technical Strategy Meeting (TSM) meetings we will capture your business goals, business issues and technology pain-points to develop an aligned and high impact strategy.

### Phase 2 : Budget Plan

We will undertake an exercise with you to understand your IT budget, and how this is currently spent.

We will analyse this to suggest savings and optimisation to ensure your investments are returning the maximum ROI.

Using your IT strategy, we will plot the highest priority and impact items to create a budget forecast, providing you with clarity over your IT spend.

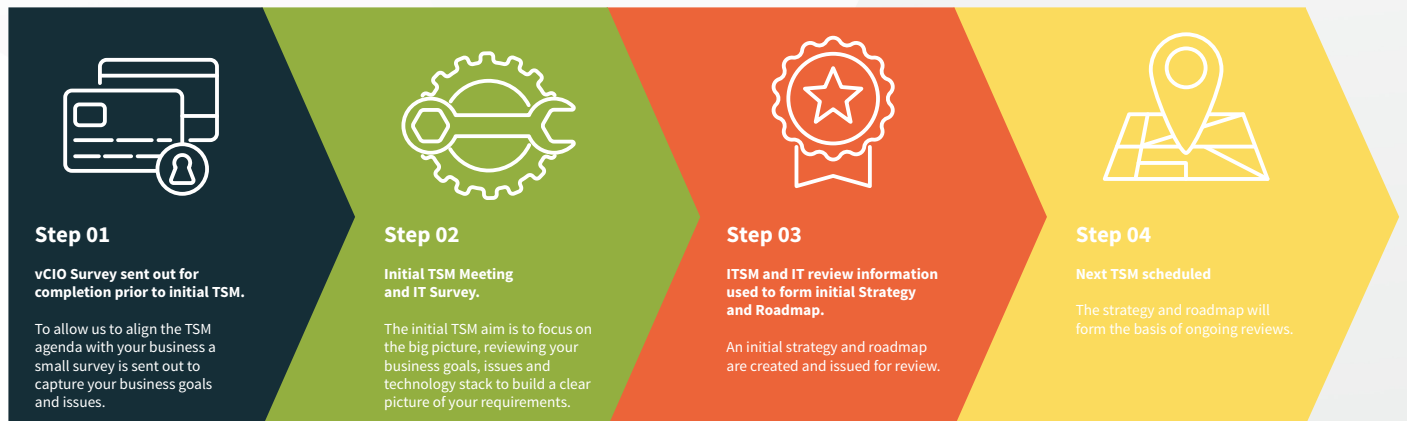

### Phase 3 : Technology Roadmap

With the information gathered in the strategy and budget planning your vCIO will create a 1 to 3-year technology roadmap.

This will chart projects and technology enhancements to give a trackable technology plan for your business.

## How do we work with you?

### Technical Strategy Meeting (TSM)

**Your business will change as time goes on;** it is important that your technology strategy continues to align with your business.
