

INSECUREWEB is a Digital Attack Surface Analysis platform that delivers Dark Web monitoring and email security solutions. It monitors the Dark Web to proactively detect stolen and compromised data that can be used to conduct further criminal activity against your organization.

Dark Web Monitoring

We keep an eye on the bad guys by monitoring dark web activity happening in hidden websites, hidden chat rooms, peer to peer networks, IRC, black market, botnets and much more. The InsecureWeb platform has gathered more than 12 Billion records from the DarkWeb.

Trustworthy email

Continuously checks email server's configuration for configuration or security issues. Support STARTTLS, SPF/DMARC, DKIM checks and other configurations.

Typosquatting

Identify cybersquatting threats to specific companies or domains, such as: phishing campaigns, domain squatting and brand-related scams.

PII And Proprietary Information Removal

Is your personal data or proprietary information circulating on the DarkWeb? Be the first to know and get it removed as soon as possible.

Social Engineering

Prevent email and brand impersonation with robust typosquatting protection and robust email security.
