

# PRIME® Healthcare Provider Directory Fulfillment

*A highly affordable solution for delivering directory accessibility*

Federal regulations demand that health insurance companies make carefully formatted PDFs of their current provider directories available for the elderly and those who are differently abled. But meeting this requirement is often a hassle and more expensive than it should be. Atlas PRIME® leverages its gold-standard, up-to-date provider directory research (grounded in Azure platforms) to create and deliver fully compliant PDF – and even printed paper – directories. We take the trouble out of fulfilling this important but often challenging demand, all at a highly affordable price.

## What we offer

### Full regulatory compliance

The Center for Medicaid Services (CMS) mandates that print directories be made available for patients over 65 years old. We enable flexible, print-ready PDF directories that comply with all applicable regulations.

### Accessibility directories

Our Accessibility Directories are ADA-

compliant – designed, developed, and edited to provide members with equal access to information in a functional format.

### Touch-free integrations

Automated integrations with the PRIME platform will facilitate timely updates of the provider data stored in your Provider Data Management System.
