

Application Modernization Jumpstart

Two-Week Assessment and Advisory Session

The technology landscape is transforming at a pace never seen before and will continue on in the coming years. The case for digital transformation has never been so urgent. In fact, the next decade of economic performance for an organization will be defined by the speed and progress of their digital and cloud journey.

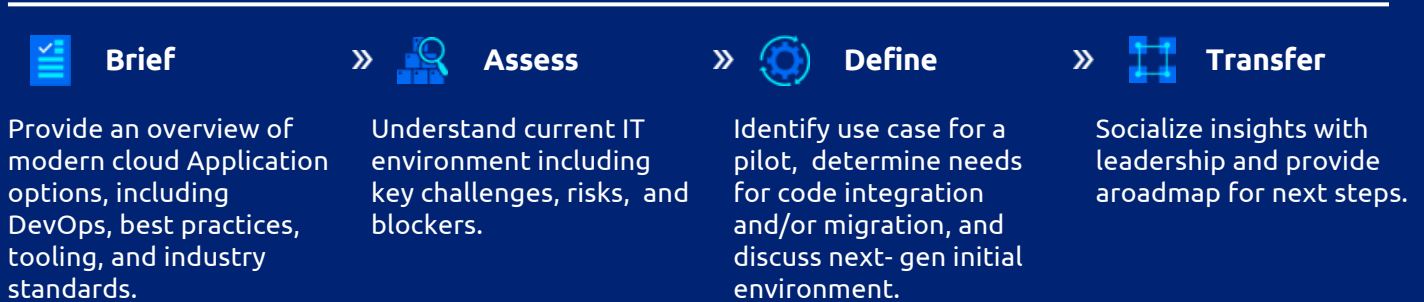

Companies across all industries are facing intense pressure from competitors offering newer, more modern software and cloud-based products and services. You face demands for richer features and visualizations.

You need higher performance and data transaction requirements, and cost limitations around development, infrastructure, and maintenance. Not to mention issues around security for out-of-date systems and customer satisfaction issues. You need to upgrade or risk losing out in the marketplace. Atmosera has long experience in moving enterprise applications and data to Azure and the modern web.

Accelerate your journey to the cloud with a modernized application landscape

In this engagement, our experts will review your existing application landscape, assess your current infrastructure and business/technical needs, and provide guidance and next steps for a path to modernizing your app environment, accelerating time-to-market and driving new customer experiences.

Example Delivery Process

Final Deliverables

 **Duration: 2-Weeks**  **Cost: \$10,000**

 Assessment review of the current IT set-up.

 Next steps for modernizing your tooling & processes.
