

# Accessibility Testing

Atos accessibility testing helps evaluate your existing websites, services and applications against standards like EN301549, Section 508 and WCAG 2.2 – to ensure that they serve the widest possible audience as well as ensure legal compliance

## What We Offer

Provide a suite of services to ensure compliance with international and national laws and standards, e.g.:

- ADA (USA)
- ACA and AODA (Canada)
- EAA (Europe)
- Equality Act (UK).

Help design products, tools, and services that can be used effectively by everyone:

- Employees and customers with disabilities
- Aging employees and customers
- Employees and customers unfamiliar with a product, tool, or service

# Accessibility Testing

## How it Works

Accessible Products, Tools, and Services address the needs of the world's largest minority group. Ensuring Accessibility is a business imperative.

Our core team of accessibility experts have many decades of experience in Accessibility testing and auditing and have been internationally recognized for their contributions to standards and accessibility development.

Atos provided "Accessibility Testing" through dedicated Accessibility specialists and an Accessibility manager. This increased efficiency and insured that the Atos team were fully aware of the organization's needs and culture.

## Execution Strategies and Solutions

The Accessibility Testing services comprise 4 core Accessibility Testing services.

- Accessibility Auditing
- Interoperability Testing
- End User Testing
- Continuous Monitoring

The services are commonly used in conjunction with other Accessibility Services provided by Atos and with Design and Development teams.

Accessibility testing should be an integral part of the design and development steps of a product, not simply a test before deployment.

# Accessibility Testing

## Customer Outcomes

The client's applications and tools are legally compliant, and the organization's commitment to its staff is demonstrably met.

Persons with Disabilities (both staff and customers) have equal access to features and improvements in their quality of experience.

The use of dedicated resources and an Accessibility manager builds a partnership between Atos and the organization.
