

# Atos M365 Data Governance

## Protect and govern data – wherever it lives

The Atos logo is displayed in a large, blue, stylized font. The letters are bold and rounded, with a slight shadow effect.

Atos M365 Data Governance service empowers an organization to discover, classify, govern, and protect sensitive data within the Microsoft 365/Office 365 platform. It enables to:

- Understand your data landscape and identify important data
- Apply flexible protection actions: encryption, access restrictions, and visual markings
- Prevent accidental oversharing of sensitive information
- Automatically retain, delete, and store data and in a compliant manner

Types of data covered in Microsoft 365 include chat sessions in Microsoft Teams, emails in Exchange, and files in SharePoint and OneDrive.

This service enables Microsoft 365 Information Protection and Governance micro-services to mitigate and protect against the privacy and regulatory risks.
