

Windows 365 Cloud PC : Workshop

Attosol's Windows 365 Cloud PC workshop is a 3-day free of cost program.

Windows 365 can help you centralize access to data and software from corporate resources and also provide you security and reliability. These days, most organizations give all their users a laptop to work from. This transition to more portable and location-flexible work devices has accelerated with the COVID-19 pandemic, and these laptops do form a security risk compared to the traditional thin client workplace. Windows 365 enables users to have the same Windows environment from anywhere in the world on almost any device.

With the power of the Azure datacentres, users get access to a fast and secure machine. Microsoft has also included its high-bandwidth internet access within the cloud PC, meaning users have a download speed of around 10000 Mbps and an upload speed of about 3000 Mbps.

With Windows 365, you can make your users productive on any device or any browser.

The 3-day Workshop will include the following sessions:

Day 1:

- Windows 365 Overview
- Cloud PC capabilities
- MEM Overview

Day 2:

- Managing Cloud PC Overview
- Understanding Customer's Infrastructure
- Discuss Cloud PC scenarios per Customer's requirement

Day 3:

- Demo Test scenarios
