

Hybrid and Multi-Cloud Security and Compliance Leveraging Azure ARC

Businesses today are grappling with the challenge of adopting and adjusting to rapid technology advancements and are responding by adapting their infrastructure, applications, and operations to be cloud native.

Hybrid and multi-cloud technologies that maximize the benefits of both private and public clouds are emerging as the viable operating model.

However, this can lead to inefficient operations and the creation of silos, and there is an increasingly pressing need to manage the on-premises datacenters and multi-cloud environments with a simple and unified management and governance solution.

Azure Arc enables a single pane of glass approach for management of virtual machines outside of Azure, in private and public clouds, datacenters, and at the edge, and extends Azure management to any virtual machines in any infrastructure.

Hybrid and multi-cloud security and compliance leveraging Azure ARC

As part of a one-week hybrid and multi-cloud security and compliance readiness assessment and implementation pilot, Redapt will assist your organization in addressing the following questions through the adoption of Azure Arc:

- ◆ How to govern and operate across disparate environments?
- ◆ How to meet regulatory requirements and overcome technical hurdles?
- ◆ How to standardize visibility, operations, and compliance across a wide range of resources and locations?
- ◆ How to ensure security across the entire organization?

Key activities:

- Workshop to evaluate existing and planned Azure, multi-cloud or hybrid infrastructure and current IT security governance and compliance policies
- Leveraging Azure Arc to define security and compliance requirements within the environment
- Identify servers for pilot from one selected platform and location
- Implementation of a dashboard and workbook in Azure, leveraging data from Azure Arc enabled servers
 - Integration with Azure Policy
 - Integration with Azure Security Center
 - Integration with Azure Monitor
- Creation of a roll-out plan for Azure Arc onto your Azure, multi-cloud or hybrid estate

Meet Redapt

Providing a clear path forward in a complex and constantly changing tech landscape.

Infrastructure

- Datacenter Infrastructure
- Advanced Engineering Services
- Infrastructure System Integration
- Global Logistics
- IT Asset Disposition

Operations

- DevOps Automation
- Site Operations
- Modern Datacenter
- Managed Services

Cloud Engineering

- Public Cloud Implementation
- Hybrid Cloud Implementation
- App & Data Migration
- Emerging Technology Integration

Business Transformation

- Cloud Native Apps
- Advanced Data & Analytics
- Artificial Intelligence
- DevOps Enablement
- IoT and Edge Solutions
