

Redapt Application Modernization Quickstart

Transform your applications with Redapt—Digital Transformation Begins Here!

One of the biggest challenges facing large organizations today is modernizing various applications (such as those developed and implemented over the years with .NET and SQL). Legacy applications may not be able to take full advantage of today's customer-centric technologies, like cloud and mobile computing. Moving applications to the cloud often requires more than spinning up new virtual machines. A thoughtful methodology and expertise in modernizing applications can lay the groundwork for future success.

Redapt's 4-week, Application Modernization QuickStart combines strategy, process, and technical expertise to meet today's most pressing business transformation challenges. Our clients benefit from enterprise efficiency, reduced cost, faster speed to market—and our clients deliver intelligent experiences to their customers using Microsoft Azure.

Our 4-week engagement consists of two key phases:

Phase 1: Architecture Design:

- Define client business objectives and project scope
 - Cost estimates of Azure consumption
 - Design Architecture
-

Phase 2: Migration Plan, modernization of applications and migration to Azure

- Define timelines, roles, and responsibilities
 - Perform gap analysis of current governance principles (security, identity, cost)
 - Migrate in-scope application, virtual machines (VMs), and databases into Azure
-

Redapt's dedicated team of application modernization and innovation experts have performed many Application Modernization QuickStarts and have developed a streamlined discovery, analysis, and migration process.

This engagement enables you to quickly identify workloads that are ideal candidates for running in Azure, provides you with a clear cost estimate of running the workloads in Azure, and helps you migrate the identified applications to Azure.

Contact us today to accelerate your business transformation goals with our Application Modernization QuickStart.
