Data Estate Assessment

Ensure scalability and flexibility.

Your company depends on you to modernize and innovate while keeping capital expenditures and operational costs top of mind. Yet it's hard when your data is living in silos, hard to find, and your reports are sloth-like.

For companies where data volumes are growing, harnessing meaningful insights from all this business information is difficult. You might know what reports you need today, but what about tomorrow? This is where Redapt can help.

No matter where your data lives or what form it may be in, we'll help you find the right cloud-based solutions for your data estate, landing your all your data into an organized library where many different sources can read from it at once, at any given time.

Redapt can architect, design, develop, and implement a modern data estate that gives you the flexibility to scale up or down depending on your needs today, tomorrow, and the day after that.

Tap Into Data & Cloud Expertise

From our data estate assessment, Redapt's team of data experts will develop a strategy for migrating your data estate to a cloud-based platform that accurately extracts value and insights from all your data sources.

Reduce Operating Costs

We can help you create a modern data estate in a cost-effective, agile cloud environment, affording you the ability to innovate much more rapidly.

Obtain Comprehensive Support

From architectural design to Power BI integration design and reporting training, we can provide you with a strategic roadmap and the right tools to align your business goals to a modern data estate.

Realize an Innovative Edge

Our team will work with you to assess your vision, helping you develop and plan a contemporary data estate that adds value to your business: giving you a competitive edge.

redapt

Let's innovate ... together

Redapt will spend one or two days with you to understand your business model and data needs, providing you with information on optimal cloud data platforms. Together we'll draft an ideal architecture and break it down into a roadmap, identifying any risk areas along the way.

Be heard & understood

We listen to you. We hear your business goals—how you go to market and how you engage with your customers. Our team listens while you explain your current (or proposed) architecture, your upstream and downstream systems, pain points, and goals.

Learn solution options

We'll present an overview of relevant technologies—their pros and cons, how they're used, and how each solution approaches data ingestion, management, and analysis on cloud-based data platforms. Our team will provide real-world case studies of where these technologies fit together. This is an educational session, where questions are encouraged.

Roadmapping & ideation

We'll have a whiteboarding session where we jointly solve your business challenges using the appropriate cloud technologies. Together we'll refine the design through iterations, "poking holes" and dialing in an ideal architecture. The output of this session is a candidate architecture.

Develop a plan

Redapt will work with you to develop a plan, breaking the work down into phases. Our focus will be on the individual steps to take your candidate architecture into a live business solution. From migration to deployment paths, we'll breakdown each task for you.
