

Azure Migration Jumpstart

The Redapt team offers an Azure migration jumpstart to businesses that are looking to make the move and want guidance along the way. Our team offers a rare breadth of experience across multiple tool sets— Microsoft Azure, Networking and connectivity, Governance, Security, Compliance, Azure Migrate, Azure Site Recovery, among many others. Redapt Modern Datacenter practice will help you transform your environment following best practices with a secure and scalable deployment.

Redapt has created a robust Azure migration methodology that combines Azure native migration tools and proprietary migration templates. The Redapt Azure migration methodology simplifies the migration process while building confidence in the new Azure environment with minimal disruptions to the business. This allows IT operations to deliver business value with speed and innovation the organization needs.

Duration: 6 weeks

With the Redapt's approach you will have a solid foundation to build upon that will allow the organization to grow and scale as it meets customer demand.

As part of this 6-week Azure migration package, we deliver:

Plan the Digital Estate

Ready the Environment

Adopt the Environment

Program Details

Plan the Digital Estate

- Define & prioritize workloads
- Estimate timelines and establish plan

Ready the Environment

- Governance
- Security building blocks
- Create landing zone

Adopt the Environment

- Test
- Secure
- Migrate

Outcome

- A fully functioning Azure landing zone in one region
- Up to 100 servers migrated to the created Azure landing zone
- Predictable migration cost and reduced time to market

Cost

\$45,000*

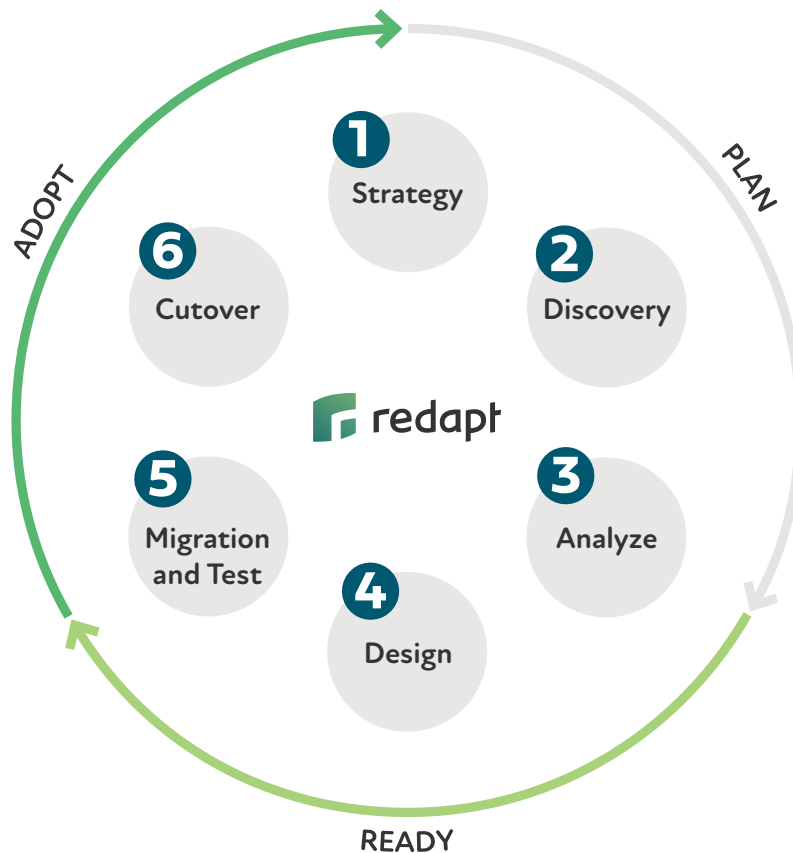

*Estimated price provided is based on an IAAS migration of up to 100 servers, actual timeline and cost may vary based on scope of engagement. Redapt will help explore if you are eligible for any Microsoft funding.

Program Details

ASR Failover plan

Lead	Task
Customer	<ul style="list-style-type: none">Pre-Cutover: Provide test script and complete tests in production
Customer	<ul style="list-style-type: none">Pre-Cutover: Confirm production functionality on prem
Joint	<ul style="list-style-type: none">Pre-Cutover: Look at servers to confirm cutover sequence
Customer	<ul style="list-style-type: none">Pre-Cutover: Send customer maintenance notice
Redapt	<ul style="list-style-type: none">Pre-Cutover: Ensure RDP access to servers is available
Joint	<ul style="list-style-type: none">Pre-Cutover: Establish connection to Azure (VPN/ER/Jumpbox)

Redapt's Cloud Migration Process

Meet Redapt

Providing a clear path forward in a complex and constantly changing tech landscape.

Infrastructure

- Datacenter Infrastructure
- Advanced Engineering Services
- Infrastructure System Integration
- Global Logistics

Operations

- DevOps Automation
- Site Operations
- Modern Datacenter
- Managed Services

Cloud Engineering

- Public Cloud Implementation
- Hybrid Cloud Implementation
- App & Data Migration
- Emerging Technology Integration

Business Transformation

- Cloud Native Apps
- Advanced Data & Analytics
- Artificial Intelligence
- DevOps Enablement
- IoT and Edge Solutions
