

Azure Security Discovery & Design Review

As companies move ahead with digital transformation, the protection of data is becoming a core business necessity

The Redapt Azure Security QuickStart enables organizations to understand current state and enhance their security posture and operations. Our approach focuses on design, implementation, operations, and validating security and compliance to establish a program that includes best practices in the overall security strategy.

By leveraging the strengths of solutions available as part of Microsoft Azure security portfolio, architecture best practices, operational model we help customers ensure a compliant Azure environment that is aligned to support the future state.

Redapt's Azure Security discovery and design offering where we identify the operational model, supporting tools and security operations processes that are aligned to support the future state of the organization.

- Security Standards, Policy review & gap analysis
- Compliance requirements & gap analysis
- Cloud Architecture review and identify services to meet security and regulatory certification standards and requirements
- Identify access management and review for organizational control over cloud-based services
- Secure operations management recommendations based on industry standard security best practices
- Microsoft Azure security portfolio review
