What is The Modern Workplace?

The modern workplace is a flexible, modern, and safe workplace to the individual end user

The concept is based on a harmonious combination of the 3 areas **Endpoint Management, Identity & Access Management and Collaboration Solutions,** which together constitute the most optimal setup, but which can also be used independently of each other, depending on the existing starting point. We baseline centered on a tested framework for implementation.

Modern Endpoint Managment

Modern Endpoint Management

With our modern endpoint management solution, we will deliver a modern solution which keeps your devices and data secure in a cloud managed solution.

This solution is for organizations that wants to:

- Ship devices directly to users
- Automatically receive applications and configurations on devices dynamically from the cloud.
- Allow users to be productive from anywhere, while protecting and securing user and organization data
- Perform remote actions such as wiping a device remotely.
- Provide your users with a Single-Sign-On experience to cloud and on-premises apps.
- Managed iOS, Android, MacOS and windows devices.
- Manage device security in Microsoft 365 security center.
- Use Secure score to validate your security posture against Microsoft best practices.
- Vulnerability management on all device types.
- Manage and implement automated security remediations.
