Carrier Rating Integration | SHIP

Parcel and LTL shipping without the hassle

Supply Chain Cloud Ship seamlessly connects your enterprise platform to the top parcel and LTL carriers in North America, Europe, and Australia. You don't have to export addresses and shipping data into a spreadsheet or research carriers one at a time. Supply Chain Cloud Ship does the work for you.

Using data directly from your enterprise platform, Supply Chain Cloud Ship allows you to rate shop your contracted carriers to provide you accurate shipping estimates based on package weight, dimensions, delivery location and time.
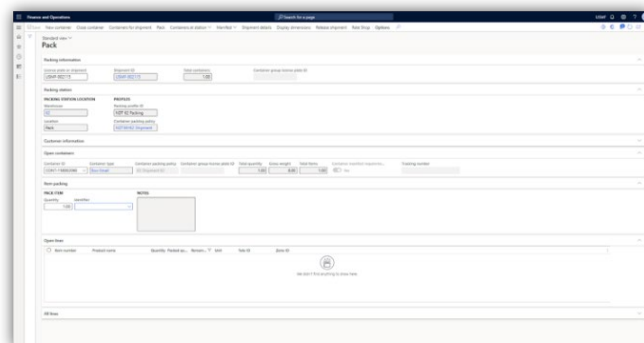

Once you select your preferred carrier and delivery method, Supply Chain Cloud Ship generates carrier compliant shipping labels, including return labels, and tracking numbers. All the shipping data, including costs, ties back to your enterprise system to support account assignments and billing.

Key Features & Benefits

- Meet compliance and customer requirements with a variety of accessorials, including Saturday delivery, COD, adult signature, insurance, and hazardous materials
- Save steps with automated weight capture using your pack station scale
- Easily perform international shipping with automatic document generation, including commercial invoices

Make shipping profitable

- Save money and time with real-time rate shopping from FedEx, UPS, USPS, DHL, Purolator, and more based on weight, dimensions (DIM), location, and delivery speed
- Choose to invoice customers for the negotiated or list rate or mark up for handling
- Easily use your own or your customers' credentials, or bill to a third party
