

Solve Meaningful Challenges & Realize Value

Care providers tell us these are their most immediate challenges

#1

Clinician experience and workforce pressures

A happy and healthy clinician provides better care and creates more engaged and healthy patients. Conversely, clinician burnout can affect retention, productivity, patient experience and even outcomes. More collaborative clinicians are also happier than less collaborative ones.

#2

Patient experience

Patients increasingly value — and expect — experiences that are personalized and convenient. The next generation of healthcare delivers a rich virtual care ecosystem, the ability to shop services and flexibility on who provides care and when.

#3

Health data interoperability

Digital transformation in healthcare creates more useful data, which can be combined with external and internal data to deliver more efficient clinical workflows. Embedded with security to protect privacy, this data can drive integrated care, leveraging AI and machine learning to achieve better insights, operations and outcomes.

Human-Centric

Experience Layers

Viability

Business Layer

Platform @scale

Technology Layer

We focus our thinking on **outcomes** that have a valuable **human impact** for clients, their clinicians, staff, and patients.

We dive **deep to gain an understanding of which problems to solve** from a user perspective first (rather than a system or process perspective). Then leverage technology and data to craft solutions that work for you.

This **empowers users** to accomplish more tasks in less time, increasing engagement and adoption. In a nutshell, we help you create more tailored experiences that truly delight end users and facilitate better outcomes.

Unlock Value with Incremental Change

Building Momentum by Solving Specific Challenges that Matter

1. Prove Viability with Proof-of-Concept

- Pick business area and objective to focus
- Identify process (challenge) and stakeholders
- Envision solution
- Build proof-of-concept (POC) solution

2. Demonstrate Impact with Pilot

- Implement POC with a select group of users and collect feedback
- Enhance solution based on feedback to create MVP, test & validate
- Rollout MVP to users
- Compare new process data to baseline to show measurable improvements

3. Realize Value in Implementation

- Scale solution to meet organizational needs
- Develop change management plan
- Create training materials to support user adoption
- Celebrate successes

Solution Empowerment Sprint

POWER UP

DAYS 1 - 3

Ideate together with your selected stakeholder group to explore opportunities to inject business value through the Microsoft Power Platform

Govern & Manage – gain an understanding of how you can use the Governance tools in the Microsoft Power Platform to manage solutions and create a safe space for makers to use Power Platform tools.

POWER FORWARD

DAYS 4 - 9

Design, Test, Implement the foundational user experience outputs, layering in a lightweight, brand-aligned visual design whilst we iteratively prototype in agile cycles

POWER ON

DAY 10

Wrap and release with a final playback session to stakeholders to demo prototype and record potential future enhancements as a backlog. Hand over for limited availability release to an identified user base (typically ~50).

Roll out

final stakeholder playback

Discover

We conduct a **research** workshop with key users (3-5) to understand pain points, explore design opportunities for your ideas. We gain access to your systems and get to grips your **technology landscape** in readiness for prototyping.

Describe

We prioritise, selecting a single idea to co-design as **wireframes** with our solution development SMEs and rapidly iterating based on feedback to reach design stability. In parallel, we start to lay the technical **foundations** for prototyping.

Design, Test, Implement

Our small team of solution development SMEs works alongside clinical, business and IT stakeholders to help you design, prototype, and build an initial working solution. We assist your stakeholders with visual design and best practices through **iterative agile development** cycles, testing and implementation.

Close

Day 10 we wrap, leaving you with **branded, pre-release prototype** ready to bring your idea to life with a limited, select audience.

* Estimated Timeline

Example: Hospital uses integrated patient app to enhance care

Challenge

Inefficient processes

An iconic provider of hospital-based healthcare was dealing with a significant influx of work in support of the COVID-19 pandemic.

It needed to improve capabilities and efficiencies in the management of care processes, from registration through to tracking patient health and reporting.

Solution

Integrated patient app

Avanade is enabling tracking of COVID-19 patients (post-diagnosis or short-listed as a potential risk) through an app developed with PowerApps, using Power Automate for integration with hospital systems.

Since the hospital had on-premise APIs, we are using Azure API Management, Azure Functions, and VPN from Azure to on-premise.

Results

More effective in-home care

The application enables the hospital to track the patient at home, under self-quarantine or at the hospital.

It helps create a patient care and action plan and generates documents for recovered patient discharge activities.

A Lean Approach

- Engage a **core group** of employees who will be early adopters
- Establish a **shared vision** for what you would like to achieve
- Learn what you need to know now to **prove value** and **plan a smart path** forward to meet the needs of your organization
- Build and launch an initial solution that addresses a defined **end-user need** and delivers **measurable value**
- Implement a simple high-level operating model to **manage and scale** the solution with future adoption growth

A Workflow Wellness Care Plan for You

- 1. Identify Stakeholders (<8)**
 - Sponsor
 - Lead
 - Key clinical stakeholders
 - Key IT stakeholders (including IT admin & pro-dev)
- 2. Pre-workshop Learning**
 - Stakeholder Interviews (1 hr each, remote)
- 3. 10-day Solution Empowerment Sprint**
(on-site & virtual collaboration)

What's Next?

Celebrate Success and Continue the Journey of Workflow Innovation

1. Prove Viability with Proof-of-Concept

- Pick business area and objective to focus
- Identify process (challenge) and stakeholders
- Envision solution
- Build proof-of-concept (POC) solution

2. Demonstrate Impact with Pilot

- Implement POC with a select group of users and collect feedback
- Enhance solution based on feedback to create MVP, test & validate
- Rollout MVP to users
- Compare new process data to baseline to show measurable improvements

3. Realize Value in Implementation

- Scale solution to meet organizational needs
- Develop change management plan
- Create training materials to support user adoption

Thank you!

Avanade Care 24/7

- *Better Experiences*
- *Better Care*
- *Better Insights*

*Robust solutions based on Microsoft technologies
and tailored to the digital needs of your enterprise*

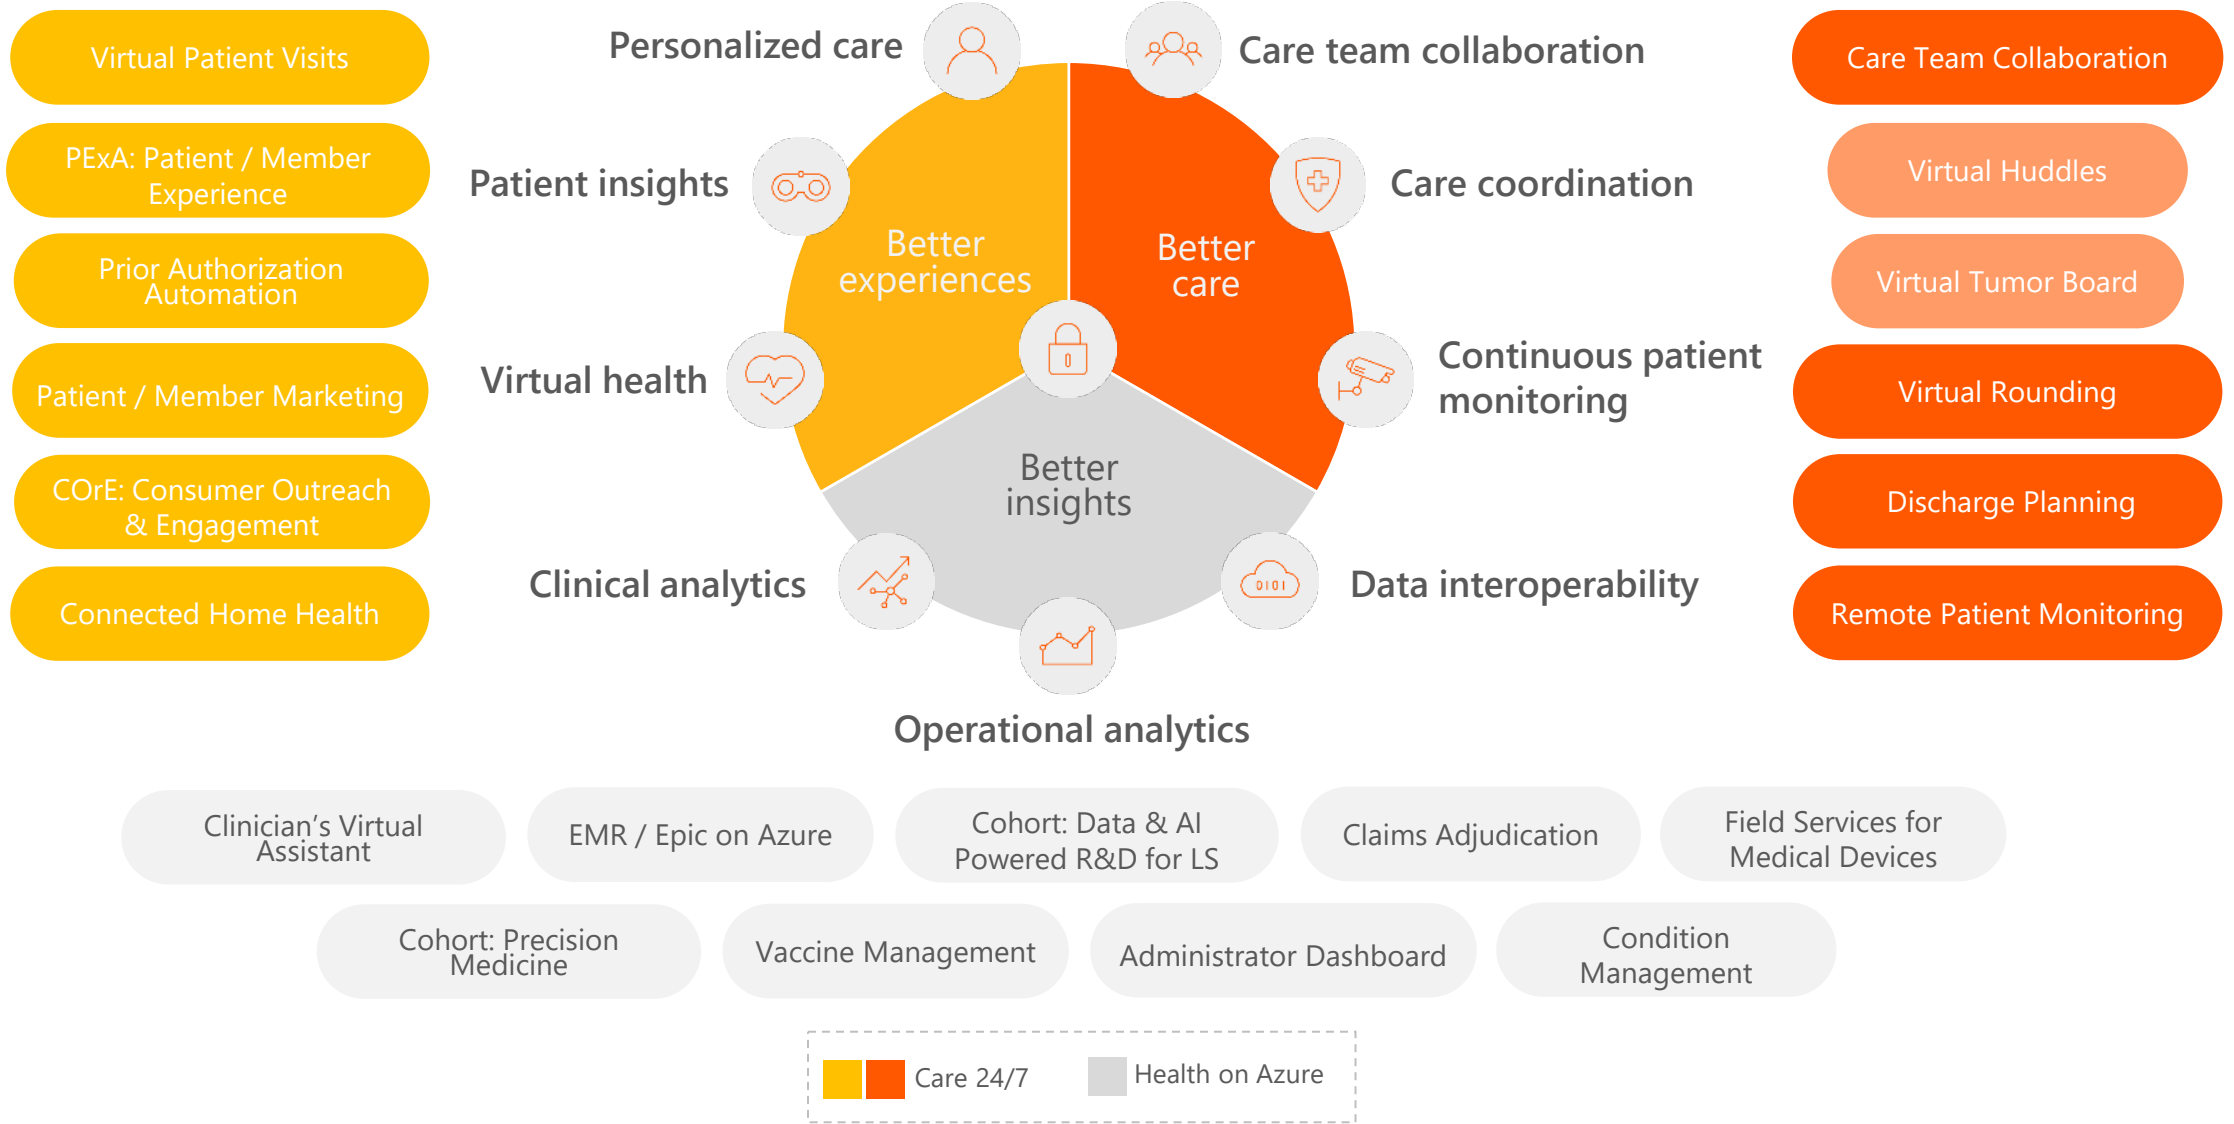

Care 24/7
leverages
virtual, digital,
data and
AI capabilities
to improve
experiences
and outcomes

- Intuitive, easy to use virtual care / telehealth platform
- Productive, real-time care team collaboration
- Health data interoperability and clinical AI assistants to reduce work cycles
- Holistic approach to data security, privacy and compliance to prevent disruptions in patient care
- Remote patient monitoring
- Hospital at Home / Home Health
- Patient experience accelerator
- Consumer outreach and acquisition

Delivering Digital Health Through Avanade's Care 24/7

Avanade

Best of Accenture and Microsoft

Created by Accenture and Microsoft, Avanade brings the best in strategy and technology to unlock more value from your IT investments and maximize business results.

Today we are arguably one of the most successful joint ventures in the industry, bringing together the world's largest community of experts on Microsoft-based solutions with 75,000+ skilled professionals across Avanade and Accenture.
