How we do - Application Monitoring Solution with Microsoft Sentinel?

Phases -Implementation

1

2

3

4

Define

Design

Develop

Deploy

- Goal definition and understanding the business requirement.

- Understanding the unique needs of organization and outlining essential functionalities.

- Existing and proposed architecture for preparation.

- Design document listing the steps to be followed will be listed down.

- In-depth impact analysis to understand how the solution will operate within your existing infrastructure.

- Once the design phase is completed the development starts.

- Here we will create and test the proposed solution in a non-prod environment

- Then we'll run the testcases to understand how the proposed solution is working.

- Here, we deploy the security policies in the prod environment for pilot users.

- Once everything is working as expected we will roll it out to all the people in organization.

AVASOFT

Benefits – Application Monitoring Solution with Microsoft Sentinel?

- Protect applications with advanced threat detection and response capabilities.

- Minimize downtime by proactively identifying and addressing issues.

- Streamline operations with centralized monitoring and reporting for all applications.

- Gain insights into application performance and security posture with detailed analytics.

- Our team leverages Microsoft Sentinel's automation features to orchestrate incident response workflows within your application environments, ensuring swift and efficient resolution to minimize downtime.
