

Simplify password management and reduce IT workload with our seamless Password Reset Bot

Overview

Transform your IT operations with our Password Reset Bot, powered by Copilot Studio. This advanced solution automates user authentication, account verification, and password resets. By managing routine tasks, the bot reduces response times and eases IT workload, enabling your team to focus on more complex issues. All data interactions are securely encrypted in transit and at rest, ensuring the highest level of security throughout the process.

Key Features

★ User Authentication

Leverage email verification and OTP sent to mobile numbers for robust user authentication.

★ Account Status Verification

Ensure user accounts are active and present in the system before proceeding with the password reset.

★ Integrate with SaaS Platforms

Seamlessly connect with any SaaS platforms to streamline the processing of password reset requests.

★ Automate Password Reset

Assist users through each step of the password reset process, ensuring quick and efficient resets.

★ Enforce Robust Access Control

Implement advanced permission settings to ensure users access only relevant information, strengthening data security and privacy.

Deliverables

Fully Configured Password Reset Assistant: A bot built with Copilot Studio, designed to handle password reset requests securely and efficiently.

Enable Secure User Authentication: Incorporate email and OTP-based verification within the bot, ensuring secure and reliable user authentication.

Seamless Security Integration: Leverage Microsoft 365 security features to safeguard sensitive information, maintain compliance, and align with your organizational policies.
