Data Foundation Hub Workshop

Microsoft
Solutions Partner

Timeline

The workshop spans a concise 2-day engagement with additional support and consultation provided thereafter.

Overview

The Data Foundation Hub Workshop is a tailored learning experience designed to facilitate rapid deployment and customization of your data warehousing and reporting infrastructure within Azure. Recognizing that each industry has unique data needs, this workshop introduces a pre-built DW and reporting framework that is preconfigured with essential tables and pipelines, streamlining the implementation process. The workshop addresses how to adjust this groundwork to fit specialized requirements, so your organization can quickly harness the power of data insights.

Deliverables

Comprehensive workshop presentations, notes, and reference materials.

A roadmap for adjusting the default setup to your specific business requirements.

A deployable proof of concept using Data Foundation Hub tailored for your vertical industry.

A period of post-workshop support for smooth hub integration and troubleshooting.

Key Features

✦ **Pre-configured DW & Reporting Templates**

Industry-specific data models to kick-start your data initiative.

✦ **Customization Strategies**

Techniques for adapting and expanding the foundational hub to meet unique business needs.

✦ **Azure Cloud Integration**

Utilize Azure's array of services to enhance your data infrastructure's capabilities.

✦ **Best Practices & Governance**

Guidance on maintaining data quality, security, and compliance.

✦ **Interactive Learning**

Hands-on exercises with real-world case studies for practical understanding.

Next Steps

✦ Connect with us to acknowledge your industry-specific data needs for the workshop.

✦ Participate actively in the workshop and prepare to leverage the delivered blueprints to enhance your data capabilities.
