

DevOps with GitHub

2 Weeks Assessment

AVASOFT's proactive approach for enhancing your company's existing and future DevOps strategies

Optimizing the pace at which upgrades are delivered and simultaneously evolving is a demanding undertaking. In addition, it is also vital to ensure consistent and dependable application during the process.

Modernizing your application DevOps trends using a successful strategy and specialized Accelerators is the only way to reach these goals.

Avasoft's DevOps GitHub Accelerator is a versatile framework suitable for all types of enterprises. It will provide a strategy for refining your firm's use of GitHub so that you can utilize the advantages and industry standards of Azure cloud solutions.

Less Downtime

Our 2-weeks assessment is straightforward and effective. Here is how we begin and conclude the process:

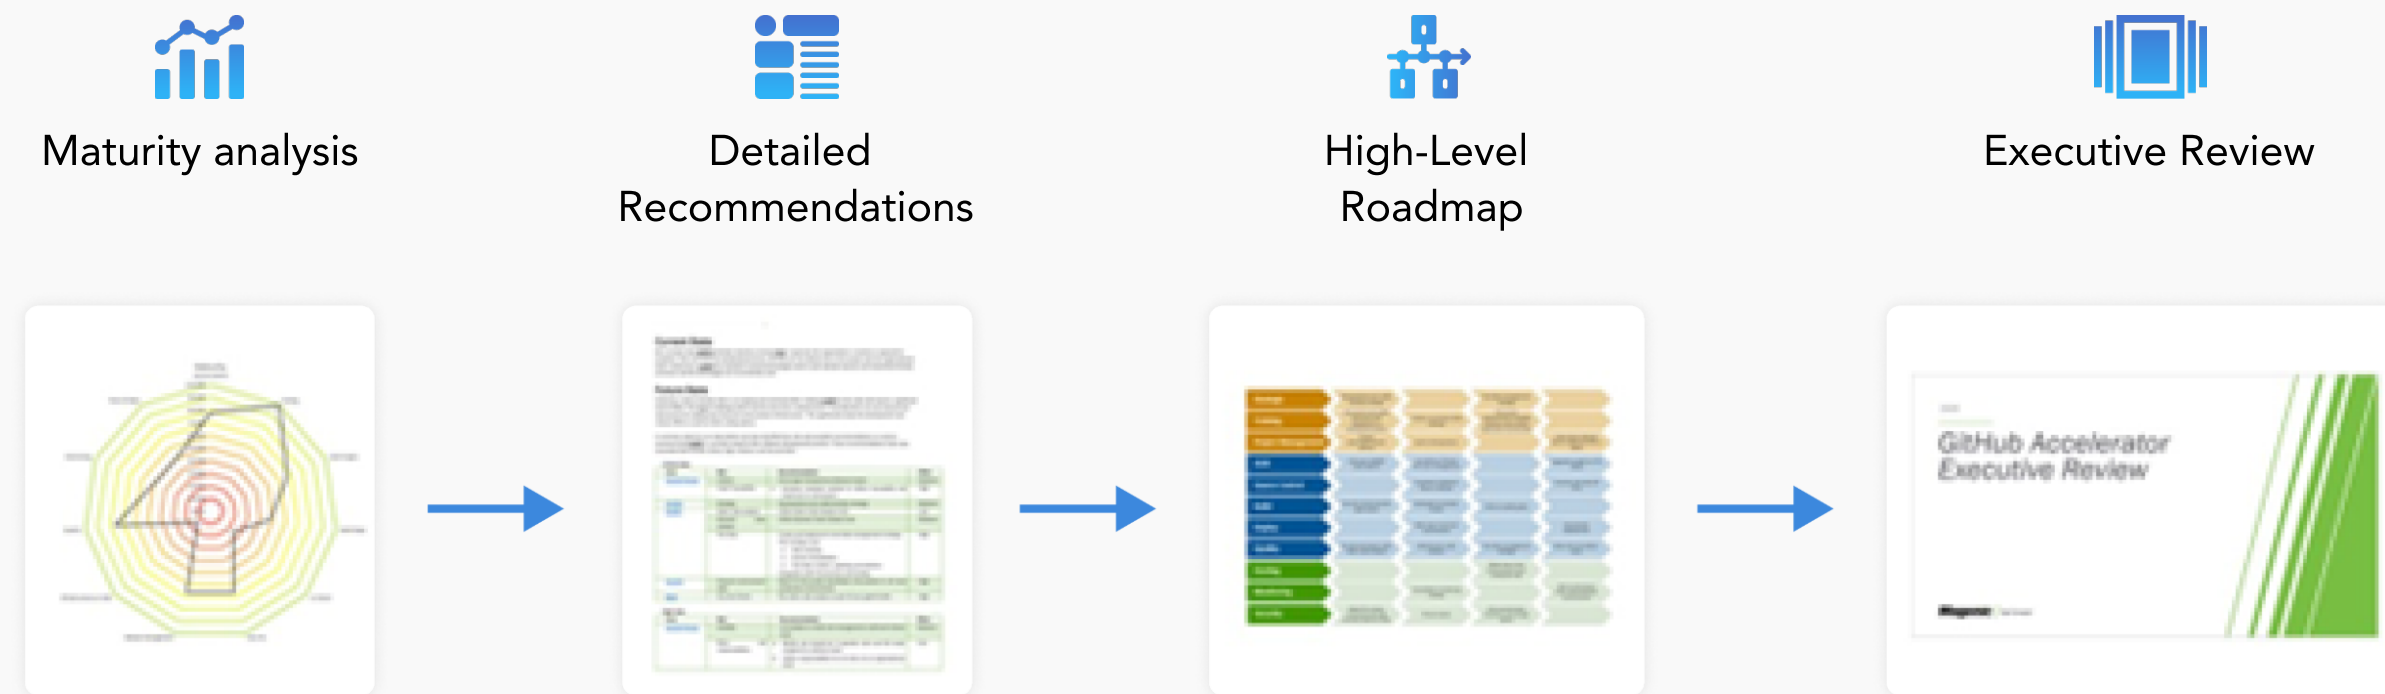

- **Week 1:** Build an effective roadmap and have a collaborative discussion with important stakeholders
- **Week 2:** Follow-up, reinforce the roadmap, finalize it, and execute.

Our full-scale package covers everything you need. This has been highlighted below:

- A comprehensive framework that is built on your firm's current and prospective goals.
- A high-level strategy outlining what must be accomplished to advance your DevOps competence.
- GitHub wikis and/or pages for reference.
- Insights and suggestions for enhancing the DevOps methodology and mindset.
- A competency pyramid for DevOps.
- A GitHub engagement roadmap along with guidelines for DevOps.
- Integrating tools, development, safety, and deployment handling, among other things.
- Incorporating assets and tasks to specify who must accomplish what and when.
- Using GitHub functions to enable continuous integration and continuous deployment.
- Utilizing GitHub to manage projects as well as potential challenges.
- Leveraging GitHub bundles to manage components.

The outcomes are what define a tool. Here are the **Deliverables** that define ours:

- Maturity analysis
- Specialized instructions
- Comprehensive roadmap
- Executive evaluation
- Deployment of essential DevOps principles and practices
- Enablement of continuous integration and continuous deployment with GitHub features
- Asset handling with GitHub Bundles
- A proof-of-concept solution of Azure Dev/Test environments

What comes next? **A demonstration.**

A live presentation will explain how our **DevOps GitHub Accelerator** increases the adoption of GitHub and DevOps. It is thoughtfully crafted to accelerate deployment and streamline procedures.

Experience the potential of our unsurpassed framework. Schedule a demo with us.
