# Lotus Domino apps migration
8 Week Implementation

Leverage our modernization solution and migrate your Lotus Domino apps to the cloud now!

Having legacy domino apps will put your organization in frequent trouble as it has poor UI, low performance, and hardly supports any modular integration or platforms. The functionality of these domino apps lags behind - These apps restrict scalability and the productivity of the organization due to the massive amount of data accumulated over a period. The historical data are neither analyzed nor utilized, hence becoming a roadblock for the organization!

Reengineer your existing legacy application and propel the growth of your organization!

With AVASOFT'S Lotus Domino apps migration, you not only migrate and transition the data to a modern Microsoft Platform but also develop cutting-edge functionalities helping you stay ahead in the competitive edge.

Supported target platform for migration:

Microsoft 365

Microsoft Azure

Process:

Step 1: Auditing your existing application

We perform a complete audit of your applications to assess your existing legacy database, its functionality, UI, complexity, and usage patterns. We collect all the necessary details including data volume, stats, usage, users, and complexity. Further, we use these details to evaluate the requirements, make changes and develop a migration plan with a concrete roadmap.

Step 2: Migrating the application

Based on the business requirement, we follow 2 migration approaches. Our team performs either 'lift & shit' and rebuild the app without any enhancements or we rebuild the functional codes and refactor them to make it suitable for business needs and migrate it to the Microsoft platform.

Migration to Microsoft SharePoint

Lists · **Documents** · **Forms** · **Views**

Migration to Microsoft Power Platform

Power BI · **Microsoft Flow** · **PowerApps**

Step 3: Data Migration

We identify the data based on priorities and migrate it to the desired platform with utmost security, following the standard and norms. Based on the fixed timeline, we speed up the migration and ensure a throttle-less migration.

Here are the outcomes:

- Configured and optimized applications based on functionality

- Intuitive and modern UI

- Increased productivity and performance
