AdActa - your digital memory

Discover AdActa, an audit-proof, cloud-based archiving solution for maximum data security. Our solution enables the secure storage of documents from different applications, which is essential for effective cloud governance. AdActa gives you fast access to archived data and the ability to manage it efficiently. The flexibility of our solution not only reduces costs, but also eliminates the need,
IT infrastructure or archiving software. AdActa gives you control over the digital management of your data: Every access, change and deletion is logged and your data is stored securely and unchanged.

Solution characteristics

- **SAP:** AdActa serves SAP with the ArchiveLink interface and S/4HANA with the newly certified SAP CMIS interface. This allows coexistences to be mapped as well as cloud and/or on-prem solutions.

- **SharePoint**: Documents, entire folders or even SharePoint pages can be archived or outsourced manually or automatically.

- **Mail:** AdActa automatically archives entire mailboxes and functional mailboxes (e.g. purchasing or sales). Controlled by the rules you define in Outlook, emails can be collected in predefined email folders and automatically archived using AdActa's rules.

- **Teams & M365:** Microsoft Office applications are increasingly generating and storing business-relevant data that is subject to regulatory requirements and must be archived in an audit-proof manner.

- **File share:** Even today, business-relevant data is still stored on the drive.
  In order to also meet the regulatory requirements
  AdActa offers the option of archiving documents and entire folders in an audit-proof manner.

- **ERP:** With CMIS or REST-API, you can seamlessly integrate not only SAP but also other ERP systems into AdActa to meet regulatory standards. The depth of integration varies depending on the ERP system. The more metadata is transferred from ERP to AdActa and assigned to the record plan, the greater the additional benefit.

Your benefit

- **Seamless integration:** AdActa's open architecture enables smooth integration with existing systems such as SAP and MS Teams, increasing efficiency and eliminating the need for multiple platforms.

- **Future-proof**: AdActa's technical neutrality means that your data will always remain accessible and readable regardless of future system changes.

- **Highest security standards**: AdActa uses Microsoft Azure for data storage, which ensures first-class encryption and security of your data in Switzerland.

- **Compliance with legal regulations:** AdActa helps you meet legal requirements by enabling audit-proof archiving and destruction of information.

- **Cost efficiency:** AdActa uses cloud technologies to keep costs low and predictable, helping you to manage your budget effectively.

Prices

	User	Storage space	Price without PDF/A	Price with PDF/A (400 documents/mt.)	GB price above reserved Storage space
Audit-proof Archiving for SAP S/4HANA	100	1 TB	1778 CHF*	1871 CHF*	CHF 0.0241/GB/Mt.
Audit-proof Archiving for SharePoint online	100	1 TB	1647 CHF*	1740 CHF*	CHF 0.0241/GB/Mt.

*Disclaimer:

Non-binding price indication, any discounts due to increased user numbers are not yet taken into account. The AdAcata SaaS solution can also be operated simultaneously with several connectors (e.g. MS SharePoint, SAP, MS Exchange, etc.). One-off project and investment costs as well as additional services are also not included. We would be happy to work with you to develop an offer tailored to your needs.
