Confide for M365

Secure Data Collaboration & Sensitive Data Management

1.0

Organizations need to support highly confidential projects while minimizing collaboration risk

Enterprise data security is always a top concern, but when you're working on hyper-sensitive projects like M&A or audits, the stakes are that much higher. Any security breach could be catastrophic. Companies need to empower cross-functional teams (both internal and external) to collaborate effectively, while also ensuring airtight security.

CHALLENGES

As the world adjusts to hybrid and remote work, more and more critical projects are being conducted entirely online.

How can you balance collaboration and security? With so many different organizations and teams contributing to one project, it's hard to feel confident in your controls.
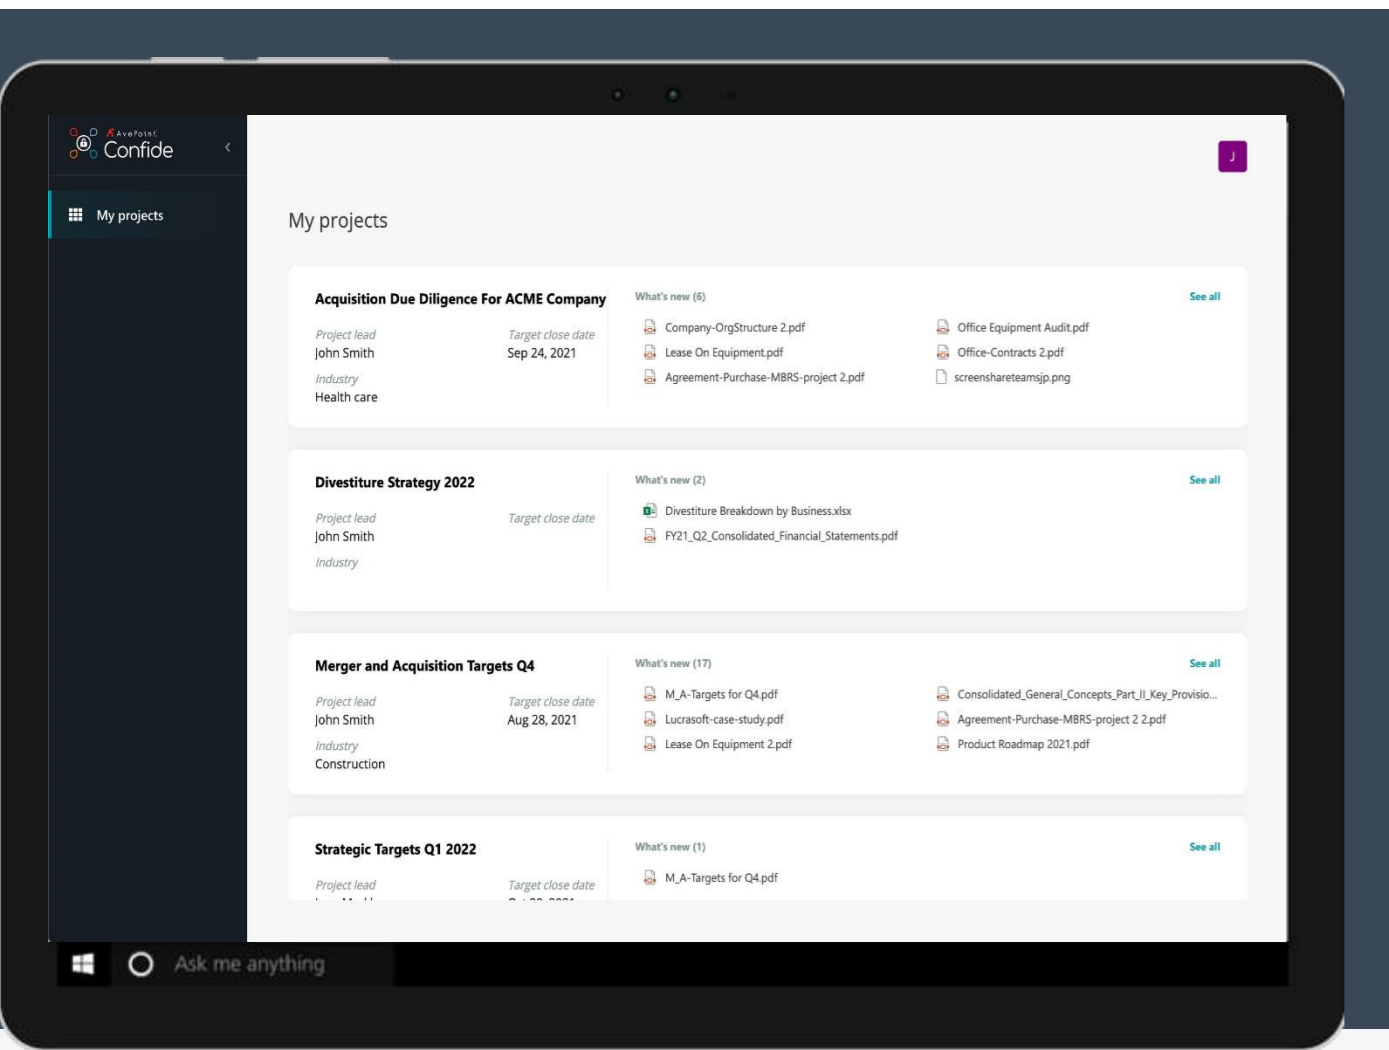

IDEAL SOLUTION

You need:

- **To lock down secure project files and communications, even from IT**
- **To give executives and team leaders control of their secure projects**
- **To enable easy collaboration between internal and external users**

DESIRED OUTCOMES

Increased confidence in controls

Reduced dependency on IT

Mitigated collaboration risk

Enhanced productivity

Strategic insights

Confide for Microsoft 365

Enable internal and external teams to collaborate securely on highly confidential projects such as M&A, audits, litigation, and more. When everything's on the line, trust in Confide.

1 SUPPORT AND SECURE COLLABORATION

Manage project-specific sharing with ease, using simple, smart controls, granular permissions, and audit trails. Assign and manage project-specific tasks with secure, in-line communications.

2 DRIVE EASE AND EFFICIENCY

Confide puts business users in the driver's seat. Provision and manage virtual project spaces that provide full control to specific business users or groups—without IT involvement.

3 MONITOR REAL-TIME INSIGHTS AND INTELLIGENCE

A centralized dashboard offers an easy way to access high-level metrics for all active projects. Drill down into individual projects to monitor user activity, project engagement, and more.

AvePoint Confide & Microsoft 365

With Confide, organizations can control collaboration on their most confidential projects. Hosted within the customer's own Microsoft tenant and backed by AvePoint's powerful security and governance framework, Confide offers a low-friction, high-security solution.

KEEP YOUR DATA CLOSE TO HOME

Confide is locally hosted, with restricted site collections for each secure project that sit within the customer's own Microsoft 365 tenant.

COLLABORATE ON FILES IN REAL-TIME

Simplify secure collaboration on Microsoft Word, Excel, and PowerPoint files with web-based co-authoring, which enables Confide users to collaborate in real-time and avoid versioning issues.

STREAMLINE ACCESS WITH SINGLE SIGN-ON

Members of other M365 tenants can leverage single sign-on (SSO) to log into your Confide instance with their home M365 account, eliminating the need to maintain a separate set of credentials for Confide.

Global Technology Firm Secures Collaboration Around M&A Due Diligence and Project Management with AvePoint Confide

"One of the reasons we historically used SharePoint is that we felt more comfortable keeping our data in-house. When our Security team found out that Confide would store the data in our own tenant, rather than hosting it themselves, it made the conversation easier. We hadn't seen that with any other VDR solutions we looked at."

WORKSPACES EASILY PROVISIONED FOR TEAMS TO RUN DUE DILIGENCE ON TARGETS
View all active projects from a centralized dashboard, drilling down further for personalized, project-specific views that display recently accessed files, new activity, and more. Plus, assign tasks directly in Confide with in-line messaging.

INSIGHTS MEASURE PARTIES' ENGAGEMENT WITH PROJECT FILES
Insights allow administrators to monitor user activity, log-in stats, project engagement, open/closed tasks, and more. These metrics can be used as an indicator of contributors' level of interest or engagement with the project at hand.

SEAMLESS COLLABORATION WITH GUEST USERS WITHOUT EXPOSING COMPANY'S AZURE AD
Hosted within the customer's own Microsoft 365 tenant and backed by AvePoint's powerful security and governance framework, Confide's simple, powerful controls allow business leaders to manage project-specific sharing with precision.
