

Quickly respond to mergers, acquisitions, divestitures, or other Microsoft 365 tenant restructuring needs with our Azure-hosted SaaS solution.

Microsoft 365 Migration with Fly

Full-fidelity migration within or across Microsoft 365 tenants

STEP 1
Analyze

Know what's relevant and important, or just collecting dust before your move. Understand your total size, channels, information architecture, checked out files, and workflows that may impact your project to improve planning.

STEP 2
Migrate

Move entire OneDrives, Exchange Online, Groups and Teams instances, sites, or individual lists and libraries to achieve a desired end goal. Then map, filter, and schedule the move, or just migrate in real time.

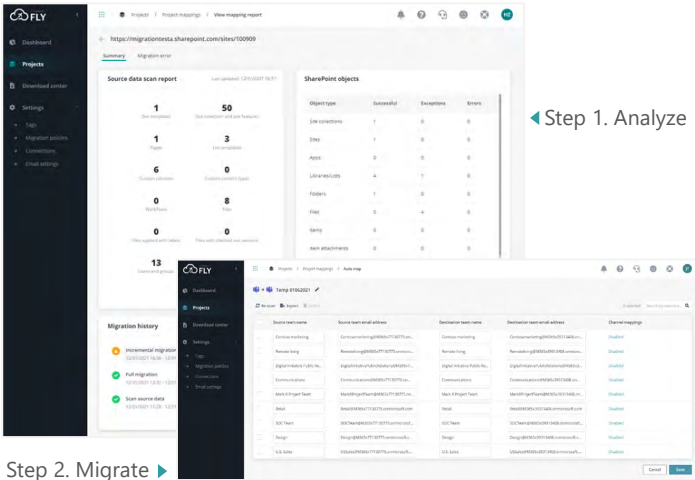

STEP 3
Monitor

Track migration status and progress on the dashboard. Validate your migration progress, generate reports that highlight actions taken, and always be in the know with automated updates sent directly to stakeholders.

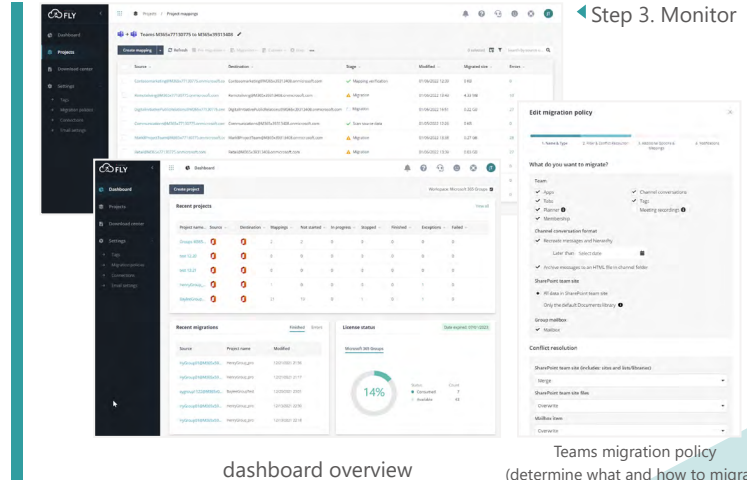

Unlimited content migration. No infrastructure hassle or installation needed.
24/7 live support.

Move, migrate, or restructure cloud content in Microsoft Teams and Microsoft 365. Migrate unlimited data easily and with full-fidelity. Our next-generation SaaS solution enables you to simply login and begin your next move. Built in discovery, mapping, and scheduling enable you to clean up or clean out data and reach your goals on time and within budget. Rest assured that 24/7 live support comes standard with AvePoint SaaS solutions.

Step 2. Migrate

PRE-MIGRATION ANALYSIS

- **Get all the details.** Understand your existing information architecture, data size, users, workflows, site activity levels, and customizations.
- **Tenant-level discovery.** Select your tenant, choose your workspace, and run your discovery. Fly offers a dashboard view for each selected workspace and details page. Export, filter, and search through your findings.
- **Create a project.** Create migration projects according to your timetables – define the scope, filter policy, method, and schedule.

MONITOR

- **Track the progress.** Monitor migration status, progress, and performance on the built-in dashboard.
- **Multiple Workload Error Reporting.** The ability to see all errors in a single file, regardless of workload type or when working on multiple projects for a single workload.
- **Validate the migration.** Report on migrated data volumes as well as site, list, library, and item counts. Understand migration trends across sources and destinations.
- **Outlook configuration.** Fly Assist can complete the final Outlook configuration tasks or guide end users through the final steps.
- **Exec-level analysis.** Download or email executive reports on job count and status, object count and status, and migration trend analysis to highlight the actions taken during the migration.
- **Standard, stand-out Support.** Our support team is standing by, 24/7. If you need an extra hand, explore our [Migration Services](#). Our experts have more than 20 years of experience and are here to help.

MIGRATE

- **Tenant-to-tenant migration.** Migrate your SharePoint Online, Exchange Online, Teams, Teams Private Channel, 1:1 and Group Chats, and Groups between different Microsoft 365 tenants or move content from Exchange on-premises to Exchange Online to consolidate, split, or restructure your Tenants.
- **Restructure on the fly.** Support ongoing restructuring of entire Teams, SharePoint sites, and mailboxes, and OneDrives or granular folders and content to respond to organizational changes in real time.
- **Migrate Teams Chats.** Migrate one-on-one chats, group chats and meeting chats across Teams.
- **Teams Shared Channel to Shared Channel migration.** The ability to migrate all channel types within Teams, either to a new tenant or within the same tenant.
- **High speed.** Migrate at top speeds using built-in Microsoft best practices. Use prime APIs to bulk upload the content within your migration scope into Azure BLOB storage plus App tokens for Microsoft 365 authorization to minimize throttling risks.
- **Take only what you need.** Configure reusable Migration Policies to use once or across multiple projects. Filter content based on properties or metadata and selectively include or exclude granular objects (Web Parts, navigation, Apps, views, permissions, and even content) so you can take what's relevant and leave the rest behind.
- **Full-fidelity data integrity.** Maintain permissions, metadata, version histories, sensitivity labels, and more. Comprehensive mapping ensures data is properly retained.
- **Enable mailbox and Channel transformation.** Convert mailboxes to an Archive, Microsoft 365 Group, Resource, or Shared mailbox type. Convert Teams channels from Standard to Private and vice-versa.
- **Migrate on your time.** Set up a schedule or migrate in real time.
