# Roadmap

---

## Week 1-2: Discovery and Planning

- Understanding your business objectives and requirements
- Assessing the current infrastructure and technology stack
- Defining key success metrics and KPIs for the chatbot application

## Week 5-6: Generative AI Model Development

- Building and training the Generative AI model based on the specific use case
- Iterative refinement of the model for improved accuracy and responsiveness
- Implementing best practices for scalability and performance on Azure

## Week 3-4: Azure Environment Setup

- Provisioning and configuring Azure resources for optimal performance
- Integrating Azure Cognitive Services for natural language processing (NLP)
- Ensuring security and compliance standards are met

## Week 7-8: Chatbot App Development & Optimization

- Developing the chatbot application interface and user experience
- Integrating the Generative AI model into the application architecture
- Fine-tuning and optimizing performance based on user feedback
