

# ERP into the cloud: Yes, but how do you decide between Business Central and Finance/SCM?

Is your ERP system no longer up to the demands of a disruptive market? Have you decided in favour of the cloud? Now you face the challenge:

Re-analyse your business processes so that you can choose the right ERP system with a clear conscience. Make the best possible use of the standard system and, if necessary, skilfully and cost-effectively transfer your own solutions to the cloud. Find the right methodology to keep your ERP project within the defined budget.

What does our ERP strategy workshop offer you? In this workshop, we take a joint look at your business processes and your existing solutions. We will look at which ERP system is best suited to your needs.

Learn about the functional scope and differences between Microsoft Business Central and Finance and Supply Chain Management. As an integrated Microsoft partner, we know both ERP systems inside out and can establish the flow of data, functions and information throughout the entire Microsoft cosmos.

Based on your objectives, we will draw up an initial project and implementation roadmap, taking risk minimisation into account. Translated with DeepL.com (free version)

We will be happy to introduce you to our project methodologies. We will also give you an outlook on how to utilise connectivity and get the most out of your data. Take advantage of the benefits of AI soon. Modern cloud solutions from Microsoft already capture a lot as standard. We are also happy to take a look at the bigger picture and see which specific industry solutions (keyword: Microsoft App Source) can also help you move forward.

## What is possible with an ERP system in the cloud?

We introduce you to Microsoft Business Central and Finance and Supply Chain Management.

Benefit from:

- **Security:** High security investment in the Microsoft Cloud
- **Accessibility:** Access data from anywhere at any time
- **Collaboration:** Break down silos and share information
- **Scalability and update capability:** React quickly to requirements and update and scale at the touch of a button
- **Save resources:** Use your resources not for maintenance and operation, but for the further development of your business processes

## Connectivity with Microsoft

Seamless integration with the Microsoft platform enables improved collaboration, data consistency and security, while providing access to advanced analytics and development tools. This integration drives efficiency and productivity by creating a consistent user experience across all business applications and enables the use of Microsoft Copilot. Fellowmind Germany GmbH offers end-to-end consulting for the Microsoft platform, ranging from analysing business needs, consulting and creating specific use cases to developing and implementing solutions.

## What do you have after the workshop?

You will receive a good basis of knowledge and information, tailored to your business processes and goals, on the basis of which you can make a good decision for the right ERP system, as well as a customised project and implementation roadmap. Take advantage of our comprehensive support to optimise your processes and drive the digital transformation forward.

""The main focus of an ERP implementation should never be the ERP system, but always the business process. If I follow this rule of thumb, I create benefits and don't just implement software."

Jonathan Freischlad - Team Lead Dynamics 365 F&SCM
