Leverage Azenix's IP by adopting the right foundations and framework to ensure success

WE ARE AZENIX. Passion for technology drives us. Innovation and collaboration defines us. It's our awesome people that really set us apart.

Building great technology solutions is at the core of what we do. Our consultants provide deep, cross-industry expertise and a courageous point of view to help you break through barriers and forge a clear path forward. From platform enablement and building cloud-native apps to DevOps transformations and data pipelines, we help our customers get the most out of their technology investments while mitigating the risks that come with change.

At Azenix, we've developed a proven approach and platform called Azland, which reduces the time it takes to implement the right components of the Cloud Adoption Framework (CAF) removing any obstacles to successfully turn traditional data center enterprises into an innovative cloud-based businesses.

Enabling your accelerated uptake of Azure with Azland

Our approach is designed to meet the needs of varying businesses looking to launch, migrate apps quickly or accelerate your access to Azures Data and AI services.

We kickoff with assessment and design workshops to determine the **right components** of the CAF to implement Azland now and into the future.

Azland takes Microsoft Azure's Enterprise Scale landing zones and adds the extensive, real-world experience of the Azenix team to deliver a **best-of-breed solution** for your business.

Azland drastically **accelerates** the process of deploying a production-ready environment and post workshops we get to work straight away!

With **security baked in** you won't need to worry about whether your platform is secure - Azland has you covered!

Azenix leverages Azure compliance certifications and advanced security technology patterns to satisfy the needs of the most heavily regulated organisations.

Once deployed, Azland can grow with you! It starts small to keep costs low knowing you can easily **scale efficiently** when the time comes.

Leverage the capability of the Azure cloud to scale automatically as needed to facilitate scheduled workloads, batch runs and solutions with varying demand.
