

We are a Portuguese company created around the concepts of Excellence and Knowledge Sharing. BUSINESSSTOFUTURE (B2F) is a company founded in 2006, which focuses on the design and development of business information management solutions and decision support systems for medium and large companies, in a wide range of markets.

B2F differentiates itself from the competition by its functional approach based on the client's business model, combined with the excellence and technological innovation in each solution implemented. It is due to this ability that this organization brings together several success stories with its customers! B2F wants to assert itself in the market as a company specialized in technological solutions of intelligence and knowledge through Innovative projects for its clients following a policy of excellence and credibility.

We will help your organization to face the challenge of bringing together data from multiple sources within or outside the organization, along with highly scalable processing capability to get insights through analytical dashboards, operational reports, or advanced analytics.

This 4 phase Azure detailed assessment will help you define a cost-effective and optimized BI architecture.
