INCREASE YOUR TEAM'S PRODUCTIVITY
BY AT LEAST 15 %

TAKE ADVANTAGE OF POWER PLATFORM

It is estimated that ¼ of employee's working time, especially in supportive services, is unproductive.

The reason doesn't lie in the employee's idleness, but in their constant waiting for feedback, manual transcription of data, checking status of team's activities in person, unnecessary e-mails, to name a few.

How much time do you estimate you have in your organization?
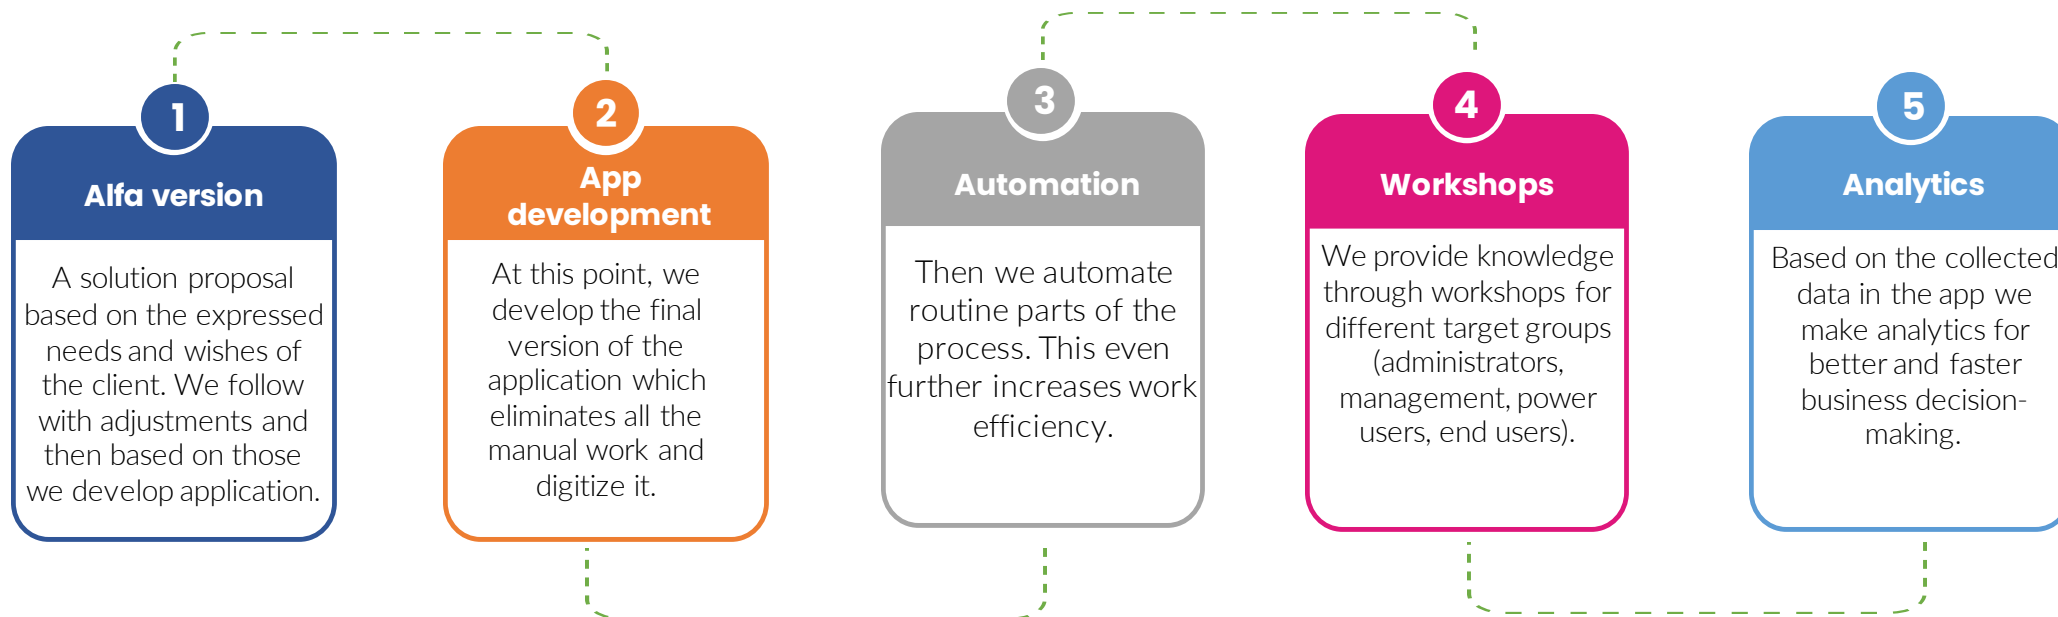

How to end this?

DIGITALIZE AND AUTOMATE

With the help of **Power Platform**, we help you to digitalize your internal processes and to create transparent mini-applications data entry and monitoring. We then visualize the collected data in transparent and interactive dashboards for faster, easier, and better business decision-making. Furthermore, we automate routine processes with this platform.

B2 IT KNOW-HOW FOR COMPLETE DIGITALIZATION

1 — Alfa version

A solution proposal based on the expressed needs and wishes of the client. We follow with adjustments and then based on those we develop application.

2 — App development

At this point, we develop the final version of the application which eliminates all the manual work and digitize it.

3 — Automation

Then we automate routine parts of the process. This even further increases work efficiency.

4 — Workshops

We provide knowledge through workshops for different target groups (administrators, management, power users, end users).

5 — Analytics

Based on the collected data in the app we make analytics for better and faster business decision-making.
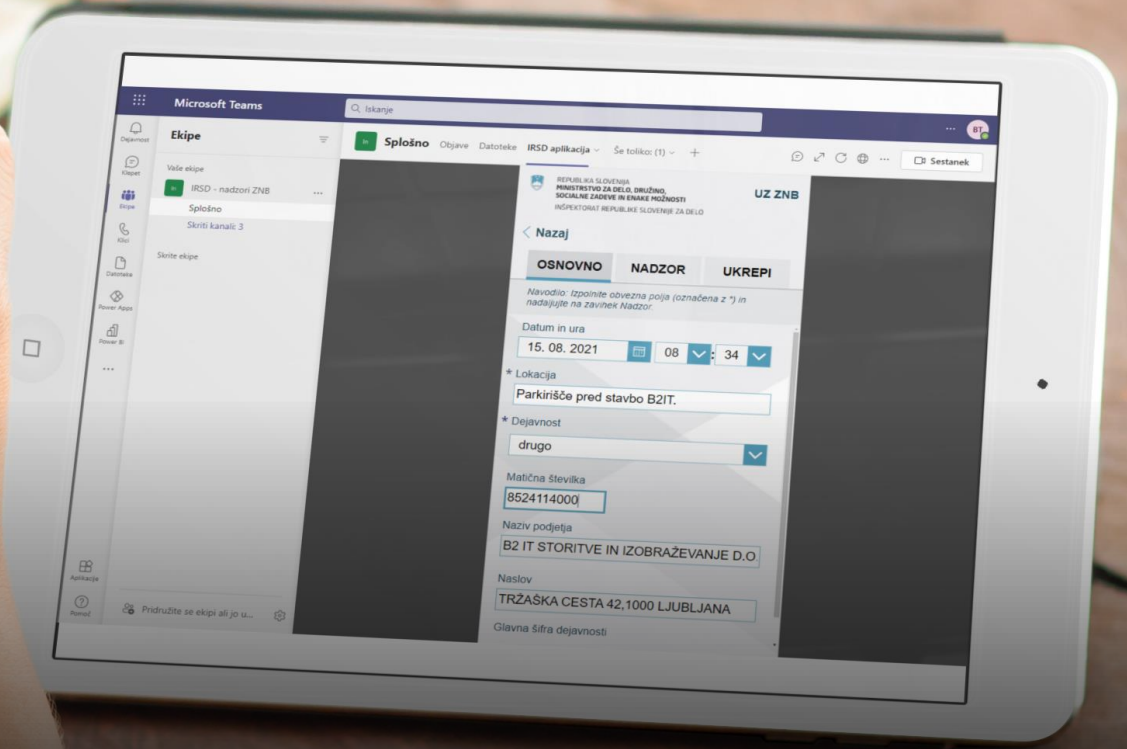

REFERENCES

»With the help of Power Apps, we digitalized one of our inspection procedures. The key benefit of digitalization is less administration and paperwork, especially on the part of inspectors, immediate insight into the work of inspectors (while inspector is still on the field), with one data entry we get both, control findings and statistical report (no need for additional reporting or repeating statistical analysis). Cooperation with B2 IT in the app's development was constructive, professional responsive and patient, in short very good.«

Jadranko Grlić
Chief inspector, Labor Inspectorate of the Republic of Slovenia

„Clarity, transparency and good control of projects are highly relevant in the pharmaceutical industry. With application APP (developed with Power Apps tool) we maintain high standards and we save a lot of time.
In the development process of the application, we cooperated with B2 IT, which showed an exceptional understanding of our needs, the ability to adapt to changes and, above all, provide technical suggestions.
In result an optimal solution was created that provides all of the above..."

Katarina Zlatolas Čekrlić
Head of therapeutic field, Medicopharmacia
