# How the process works:

**Collaboration between parties interested in the POC, process experts, and the Babybots team**

**Buildout of the proof of concept**

**Presentation to executive members demo'ing the POC/debriefing potential things to be careful of, etc.**

**Providing a "RolloutReady" rating, scaling from 1-10.**

1 being the process is a horrible candidate and should not be rolled out into automation. 10 being the process is ideal for automation.
