

### We give our all for your IT

**Mission:** We are passionately committed to the business success of our customers. We rely on innovative Microsoft cloud solutions, flexible, tailor-made managed services, and the first-class know-how of our employees.

**Know How:** Our 75 employees are constantly training on the latest Microsoft technologies. That is why we are one of the most highly certified Microsoft partners in Switzerland and can design, implement, and operate first-class and proven solutions.

### Azure Site Recovery as a Service

With Azure Site Recovery, your company remains operational even in the event of major IT failures. Site Recovery provides you with replication, failover, and recovery processes to keep your applications running even in the event of planned and unplanned outages.

What was previously only possible with an expensive, second data centre can now be obtained as a service with Azure Site Recovery much more cheaply. Not only are there no expensive investments in premises, hardware and software, but also the costly maintenance of a secondary data centre.

---

### Course of Action

In a one-day workshop, your individual security requirements with regard to downtime, availability of services, compliance and legal aspects are worked out.

Based on this, you will receive a fixed price offer for setting up the Azure Site Recovery Service. The scope of services, SLAs, maintenance and monthly fee are also defined.

---

### Results

#### Automatic protection

If your data center fails, Azure Site Recovery takes over and your IT is available again within minutes. This means that you are protected against server failure, computer viruses, fire and water damage, without having to build and maintain an expensive second data center.

Your physical and virtual servers are automatically replicated to the Azure cloud. In the event of a failure in your primary, the secondary data center on Azure takes over within a very short

time and your operation is fully functional again. In addition, with Azure Site Recovery you can meet industry standards such as ISO 27001 with little effort.

#### Safe and continuous monitoring

Azure Site Recovery continuously monitors the status of your protected systems. When replicating to Azure as a secondary location, your data is encrypted and is therefore safe from unauthorized access.

#### Orchestrated disaster recovery

With Azure Site Recovery, you can automate the recovery of services in the event of an outage in the primary data center. Applications can be called orchestrated to quickly restore service even with complex, multi-tier workloads.

---

### Services

- Setup of the service based on individual requirements.
- Once a year review of the disaster concept including failover test.
- Access to Microsoft Premium Support, also around the clock (7 x 24, for a surcharge).
- Monthly billing

---

### Your Benefit

Downtime can be expensive. That's why Azure Site Recovery lets you set the optimal recovery point objective (RPO) and recovery time object (RTO) for every system in your organization. You can protect your company from the failure of critical systems - including SQL Server, Exchange, SharePoint, SAP and Oracle. This is how you keep your data and applications available during an unplanned event.
