Security & Compliance Offer

As a Microsoft Gold Partner, we know what matters when it comes to data security and data protection.

Our consultants are familiar with the latest Microsoft security tools and have a wealth of experience from many projects.

Flexibility, tailor-made project services and managed services as well as full cost transparency characterize our offer in the security area.

Course of Action

We proceed according to the principle «Discover - Manage - Protect - Report»:

Discover: Identification and classification of data in the company

Manage: Creation and implementation of guidelines for handling the data

Protect: Implementing security measures to repel attacks and prevent data loss.

Report: Monitoring and reporting in the event of attacks and data loss.

Results

The needs, risks and framework conditions of the customer are recorded in workshops and assessments.

The security solution that is suitable for the customer and satisfies the legal requirements is then designed, data is classified, and security policies are created, and the solution is implemented with Microsoft's state of the art cloud security tools.

Services

- Regular security and management reviews to maintain service quality
- Access to Microsoft Premium Support, also around the clock (7 x 24, for a surcharge).
- License Care: With this managed service you always have your licenses under control.
- Everything from a single source: We offer you cloud services, project services and managed services, a security package that is optimally tailored to your requirements.

Your Benefit

- The security solutions are always state-of-the-art, time-consuming update cycles are no longer necessary.
- Cloud licenses and services are paid for monthly. This means that there are no investments, and the capital is not tied up.
- The services can be scaled very easily. This enables companies a high degree of flexibility in the event of fluctuations in demand and / or the number of users.
