SECURITY OPERATION SERVICES

As your trusted security partner, Barikat Security Operation Services simplifies security and risk with continuous, value-driven monitoring, management, local delivery, and an integrated security portfolio to protect your Native cloud security controls.

Barikat Security services provide a flexible delivery model designed to help you address your cloud security requirements regardless of where you are on your cloud journey.

Barikat Managed Security Operation Services (SECOPS) supports a matrix of thoroughly tested and best of breed vendor platforms and next-generation devices as virtual software installed in your cloud environment.

Barikat partner technologies include:

Scope of SECOPS

The purpose of the service is to control the health and operational conditions of the products, to ensure that the security systems related to the predictions continue their life cycle without any problems.

The work to be done on the service to be provided differs according to the product type and brand, and there is a process of applying the services in daily and weekly periods.

Basic SECOPS Processes

Control and operation of the relevant system in accordance with customer obligations and needs.

Serviced products that may occur from inside and outside; Developing warning mechanisms to monitor problems.

7X24 monitoring of system components and security alarms according to security event management processes.

Examining and evaluating the rule/policy and outputs on the system.

Examining and evaluating the logs created by the system.

Determination of improvement and update activities on the system

Coordination with the customer's relevant organization (CMO) group for update, upgrade and maintenance releases tracking and Change Management.
