

# baseVISION Security Operation Center as a Service

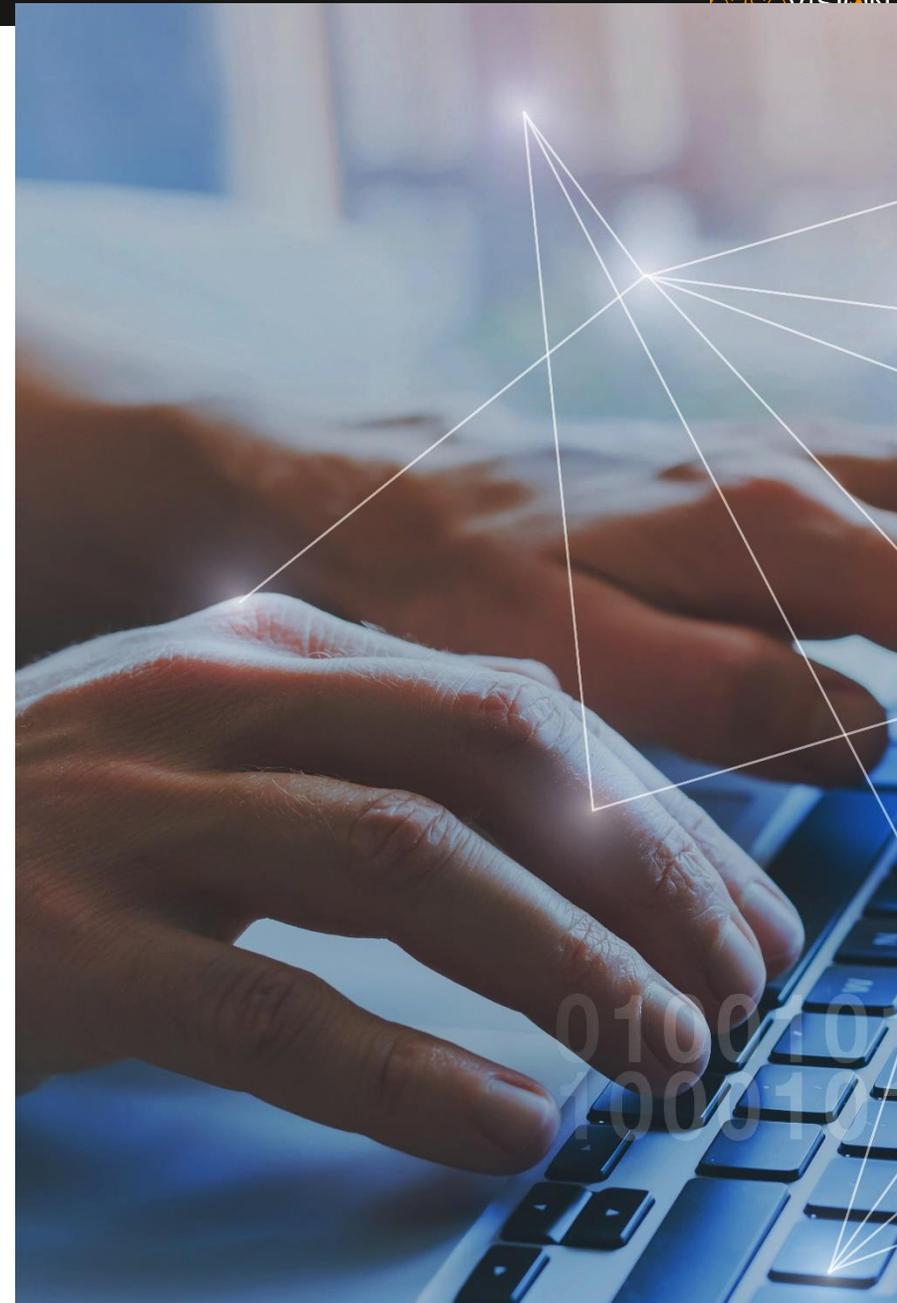

Improve your security posture with monitoring,  
alerting and reporting capabilities

**baseVISION**  
SECURE & MODERN WORKPLACE

# Benefits of a SOC

- ✓ Qualified and experienced Security Analysts
- ✓ Monitor, analyze and respond to security incidents 24x7x365
- ✓ Latest technologies and tools are used for monitoring, analysis and response
- ✓ Support customer's security professionals by providing information and recommendations
- ✓ Monthly security reports, that prioritize and focus on critical security incidents
- ✓ Service fees instead of hardware invest with requiring operation and maintenance costs

Collect

Security data across your  
enterprise

Detect

Threats with vast threat  
intelligence

Investigate

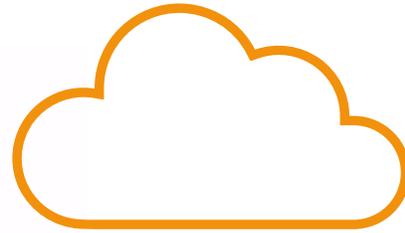

Critical incidents guided  
by AI

Respond

Rapidly and automate  
protection

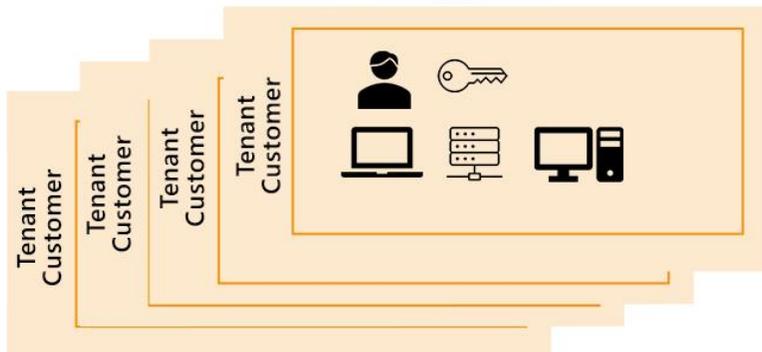

The Security Operation Center supports Security Orchestration Automation and Response (SOAR) for collection to Incident response.

baseVISION monitors your Microsoft-based cloud security services. SOC security experts carefully work with Security Incidents from solution such as:

- Microsoft Defender for Endpoint
- Microsoft Defender for Identity
- Microsoft Defender for Office 365
- Microsoft Cloud Application Security
- Azure Active Directory
- Azure Active Directory Identity Protection

# How does the baseVISION SOC work?

The baseVISION SOC provides services based on data that is collected and processed in Microsoft services like Azure Sentinel or threat protection services.

Detected Security Incidents are analyzed and investigated based on their severity level.

The aggregated and combined information is used to directly respond to Security Incident Alert.

Customer is informed and consulted where actions is required to defend against the cyber attack and mitigate further risks.

# Benefits of a cloud-based SOC

Compared to a 'traditional SOC', we use services instead of hardware or virtual servers.

- ✓ Service costs are lower than investments in infrastructure and hardware.
- ✓ Additional resources (CPU, RAM, physical Hard disks) as part of the services.
- ✓ Low infrastructure operation or maintenance costs.
- ✓ No vendor lock-in. Data remains in your infrastructure.
