

OneVueX – Advanced AI Technology for Today’s Modern School Systems

The world has dramatically changed for students, faculty, and administration in school systems and it’s about to change even more. The digitalization of education was already at a rapid pace, but now that we have entered the age of AI, transformative technologies like Cloud and generative AI are no longer table stakes. Now, it’s about more than keeping pace with the speed of technology. It’s about taking advantage of all that AI has to offer to accelerate learning and prepare for a new work environment. It’s about managing massive amounts of growing information. It’s about working, learning, and staying connected wherever you may be. And it’s about keeping systems, information, students, and staff safe and secure with Zero Trust policies.

OneVueX Unified Systems and Microsoft Solutions provide technology that administrators, teachers, and students need, supporting them through this transition. OneVueX makes it easier to achieve digital strategies with better learning and administrative outcomes, delivering advanced computing power that is easy to use, customizable, adaptable to change, and secure, with less IT maintenance and expense.

OneVueX – Advanced Technology for Modern Education

OneVueX is a **secure AI driven digital knowledge network and productivity content center** that intelligently integrates data, content, insights, and tech innovations like GenAI, displaying combined results through a single interface. With OneVueX, **generate ideas and content faster, complete time-consuming tasks, and gain AI driven insights with advanced security incorporating Zero Trust strategies.** Experience more productive teams and students, reduce IT expenses, and achieve adaptable, flexible systems, with advanced security at machine speed.

OneVueX makes it easier to **outperform, outthink, and out innovate**, with powerful AI, integration tools, and security at the speed of AI.

Prepare students, faculty, and staff for the future

Turn search to an ask, finding info in all connected systems

Maximize classroom time with AI and remote learning

Ensure faculty, students, staff, and systems are secure

What Can Your School Achieve with OneVuex?

Advanced Computing for School Administrators

Prepare Students and Faculty for the Digital Workplace

- **Superintendent Portal** provides on-demand, Live-Stream analytics, and customized dashboards for a complete view of district, school, teacher, and student performance to identify issues and opportunities for faster, better outcomes.
- **Enterprise Search** easily finds information across all connected systems using AI that eliminates the need to remember filenames or their location.
- **Digital Subject Cards and Topic Pages** connect multiple sources of information for faster, easier accessibility.
- **Integration of Microsoft Solutions** like Microsoft 365, Power BI, SharePoint, SQL, and more for advanced computing power.
- **Integration of Non-Microsoft Solutions** including District/School Portals, Student Information Systems (SIS), administrative solutions, security, and other software systems for greater transparency without disrupting school operations.
- **Intelligent Integration of solutions and security with Zero Trust architecture** provide advanced protection and seamless compliance for standards including IEP, HIPAA and more.

Centralized Learning, AI, and Collaboration

Boost Outcomes with engaging, innovative technology

- **Centralized Curriculum** is available throughout the district for consistent, transparent lesson planning.
- **Artificial Intelligence** to measure progress and enable better outcomes with features like GenAI to amplify creativity and enhance engagement, providing access through mobile devices that maximize learning and minimize disruption.
- **Accelerate productivity and innovation**, accessing, sharing, and connecting all information with powerful AI, Digital Subject Cards, and Topic Pages.
- **Integrated Collaboration Solutions** for a “connected campus” to work simultaneously with teachers, administrators, students, and parents from any location with the ability to seamlessly expand infrastructure for growing student populations.
- **Translation Features** allow faculty and students to communicate verbally and via documents in any language for a more inclusive, diverse learning environment.
- **Microsoft Educator Center** for interactive lesson plans, MIE and STEM programs creating more advanced curriculum.

System Management | IT Challenges

Improve System Management | IT & Reduce Costly Legacy Systems

- **System Integration using AI** that seamlessly connects existing solutions (cloud and on-premises) with no business disruptions for a comprehensive view of the organization.
- **Legacy Systems** are integrated, providing access on mobile devices. Integration to the cloud is at your pace, with minimal business disruption and IT cost savings and lower maintenance.
- **Down Time** is eliminated, dramatically reducing IT costs, and freeing up resources for valuable projects.
- **System Maintenance** is managed by Bass International Software and Microsoft, eliminating costly IT expenses.
- **Migration Services** offer drag-n-drop functionality for files and folders and entire system migration with full integration and functionality with no business disruptions.

Advanced Security Protecting Systems, Data & Students

Protect Systems, Data, Students and Staff with Unparalleled Security

- **Experience unmatched security** with the integration of multiple Microsoft security systems, including Microsoft CoPilot – advanced security with AI and Zero Trust architecture, securing endpoints, end users, and infrastructure from on-premises to multi-cloud environments.
- **Integrate advanced technology** like **smart cameras** to monitor activity; **smart networking** capabilities to control building access and integrate identity and credentials; monitor emails and other communications to prevent bullying and other issues.
- **Integrate Microsoft technology** to create alerts for emergency and non-emergency situations; use geolocation to allow check-ins, confirm safety and pinpoint problems; use GPS connected panic buttons to summons help; find the closest qualified personnel to respond to issues.
