Copilot Studio Chat Kickstarter

The Copilot Studio Chat Kickstarter is a five-day engagement that builds a custom Copilot in Copilot Studio which interrogates your business data to help solve a defined business process or problem.

As part of the Kickstarter, you will receive a 1-day workshop introducing you to Generative AI in addition to gathering requirements for a business challenge you face. Our experts will then build the Copilot for your identified challenge, demo and handover your solution, and then follow up with a Prompting Workshop and further guidance.

View Use Cases ↓

Rapid Introduction to Generative AI

Gain a rapid yet comprehensive understanding of Generative AI through a hands-on workshop, tailored for users without prior knowledge.

Custom Solution Development and Practical Application

The Copilot solution provides a tangible and customised experience specific to your business processes, showcasing a practical application of AI.

Low Risk and Cost-Effective

The Copilot Chat Kickstarter is designed as a low-risk entry point that enables you to explore AI capabilities without the need for significant investment or commitment.

Empowerment Through Knowledge Transfer

The prompting workshop and further guidance will equip you with the knowledge to explore and potentially scale AI solutions within your business.

Foundational Start
