Copilot Power App Kickstarter

The Copilot Power App Chat Kickstarter is an 8-day engagement that introduces the capabilities of generative AI by building a custom Copilot within the context of a Power App.

As part of the Kickstarter, you will receive a 1.5-day workshop introducing you to Generative AI and its integration with Power Apps in addition to gathering requirements for targeting a business process. Our experts will then develop a Power App (with integrated Copilot) to interact with Power App data, demo and handover your solution, and then then follow up with a Prompting Workshop and further guidance.

View Use Cases ↓

Practical AI Application

The Power App Kickstarter is designed to demystify AI technology and how it can be practically applied within existing digital workflows to create immediate value.

Guidance and Expertise

Get access to industry leaders during and after the delivery of the solution so you are kept up to date with the latest AI developments.

Enhanced App Functionality

By receiving a Power App enhanced with AI capabilities, it demonstrates how integrated Copilots can be used to elevate app functionality and user experiences.

Customised AI View

The service focuses on a specific process that is unique to your business.

Guidance on Scaling

With the inclusion of a prompting workshop and further guidance, you will be well-equipped to expand and extend your business's AI capabilities beyond the initial engagement.
