

## AI Builder Kickstarter

The AI Builder Kickstarter is an 8-day engagement that builds an automation workflow using AI Builder and out-of-the-box connectors, delivered through an application interface to track workflows and business processes.

As part of the Kickstarter, you will receive a 1.5-day workshop introducing you to Generative AI in addition to gathering requirements for targeting a business process. Our experts will then infuse AI into the chosen business process that interacts with your business data, demo and handover the solution which is then followed by a Prompting Workshop and further guidance.

[View Use Cases](#) ↓

---

### Streamlined Business Processes

By automating a business process with AI, you can significantly improve efficiency, reducing manual workloads and enhance accuracy.

---

### Practical AI Application

The service demystifies AI technology, showing how it can be applied within existing digital workflows to create immediate value.

---

### Focused on Efficiency

By targeting impactful business processes ensures that the solution will deliver clear, measurable benefits in terms of operational efficiency and effectiveness.

---

### Low-Risk and Cost-effective

Designed as a low-risk entry point, this engagement allows businesses to explore AI capabilities without significant investment or commitment.

---

### Foundational Start

The custom solution provides the foundational elements of a production ready Copilot.
