

Data Platform

The all-in-one solution to collect, organize and display secure and certified data

BeanTech's offer includes a consulting approach towards Clients in order to ensure the solution perfectly fits their needs and goals. Data Platform is an all-in-one solution to accelerate the time-to-insight of various stakeholders.

What is Data Platform?

Data Platform has a scalable infrastructure based on MS Azure technological stack and offers users an highly secure environment to take data-driven decision based on certified data collection and elaboration protocols as well as role-based data visualization. Interactive and easy-to-understand dashboards and graphs are made possible by self-service Business Analytics. Moreover, the Platform enables the management of ML projects via integrated advanced analytics services and predictive models.

Why customers use Data Platform?

- To have a scalable and flexible infrastructure to respond to the business needs of today and tomorrow.
- To deploy an easy-to-maintain solution based on market-leading technologies.
- To have a highly secure solution to get business-relevant insights from certified data

Scalable Solution

- Scalable cloud solution
- A grow-with-your-business solution
- Adapt over time

Adapt the solution to fit your needs

Market-leading technologies

- Constant update: use always the latest technologies
- Easy-to-maintain applications
- Take advantage of MS security services

Simplify the management of your solution

Secure & certified data

- Full-chain data lineage
- Role-based platform access
- GDPR compliant

Work with certified data in a secure environment

«A crucial aspect for us was the implementation of a cloud infrastructure based on MS Azure services, instead of a traditional on-prem one. As the final outcome, we were given a highly flexible and scalable platform with a wide spectrum of analysis on KPIs and variables. Moreover, business stakeholders could finally benefit from an easy-to-use and single-source-of-truth solution, which significantly reduced their time-to-insight. Thanks to Data Platform we are able to take data-informed decisions based on certified data.»
