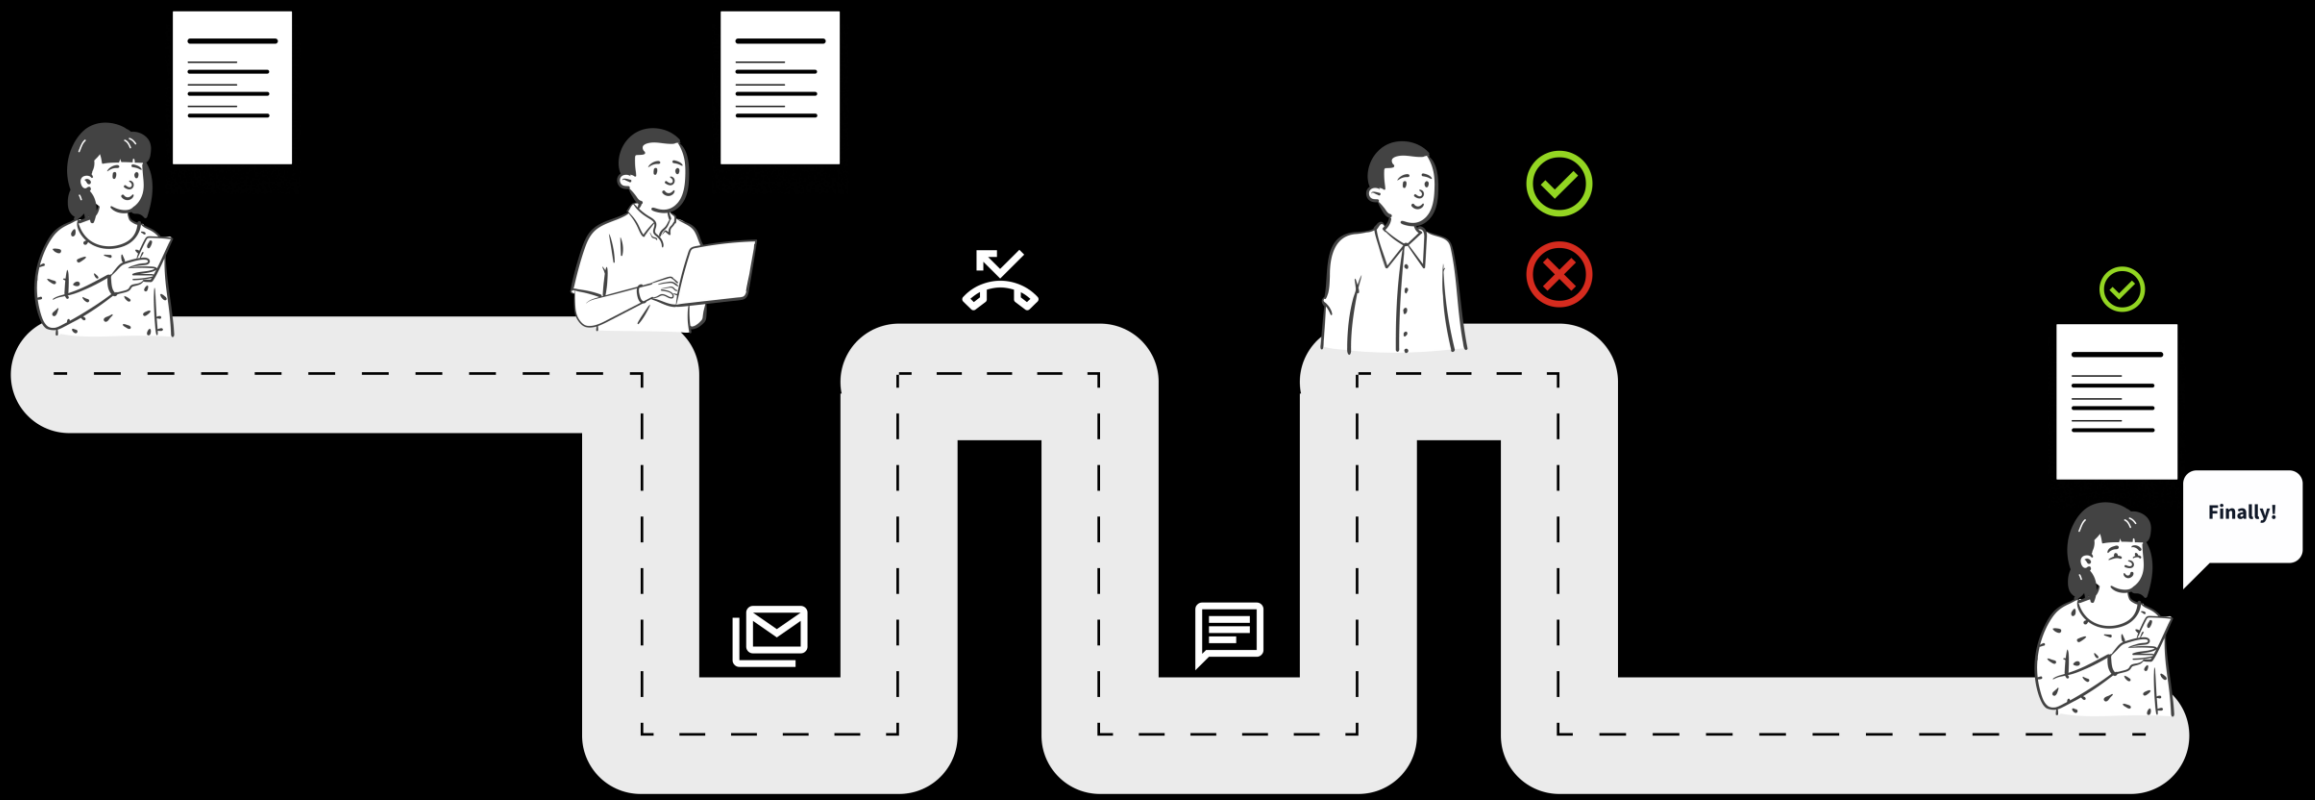
Swarm to unlock the full potential of AI-enhanced approval workflows



BearingPoint®

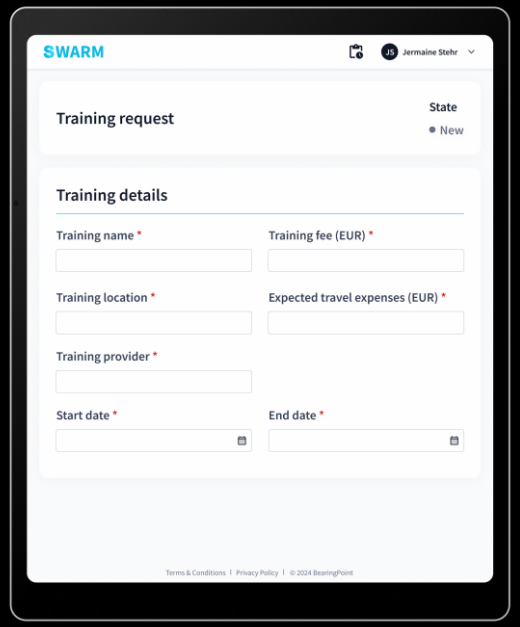
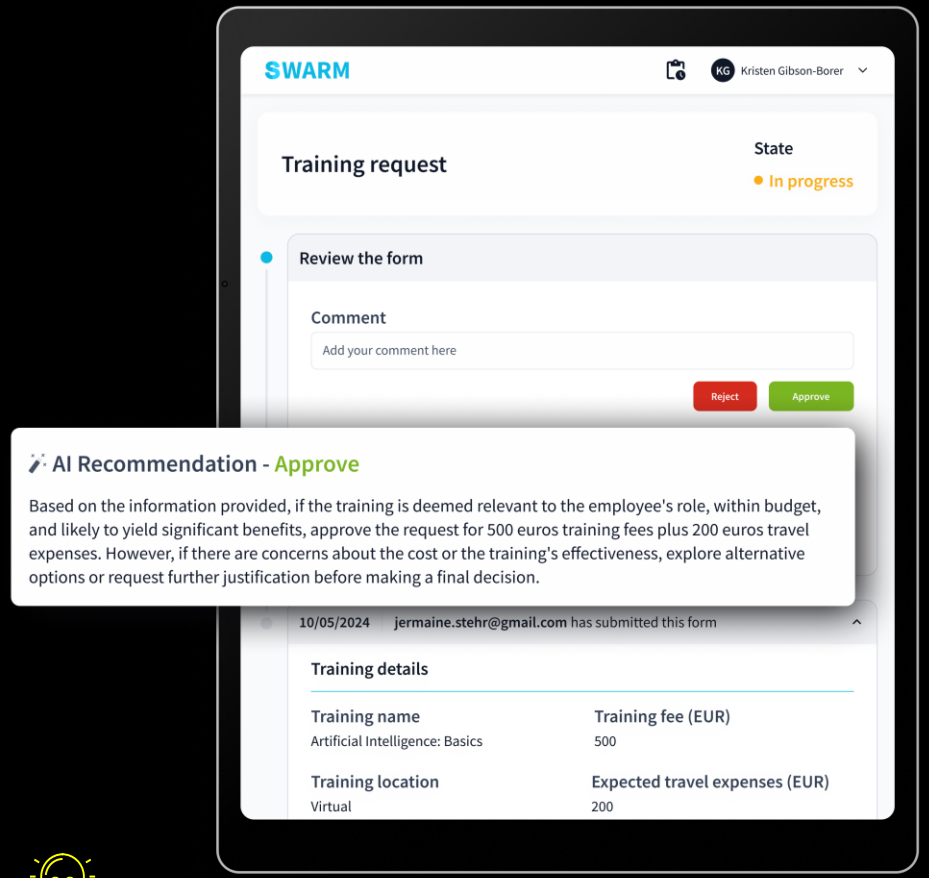
Case Study - Our Approval Process - Example - add more info about the example

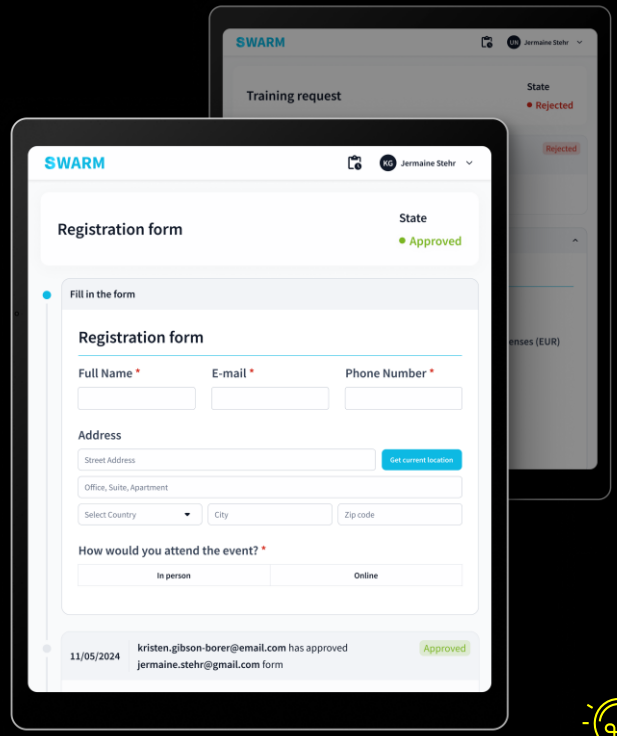
Fill in the training request

Swarm will use AI to recommend approval or rejection.

Requester is notified of the decision. If approved, they receive the registration form.







The information is going to be stored in the AI knowledgebase.

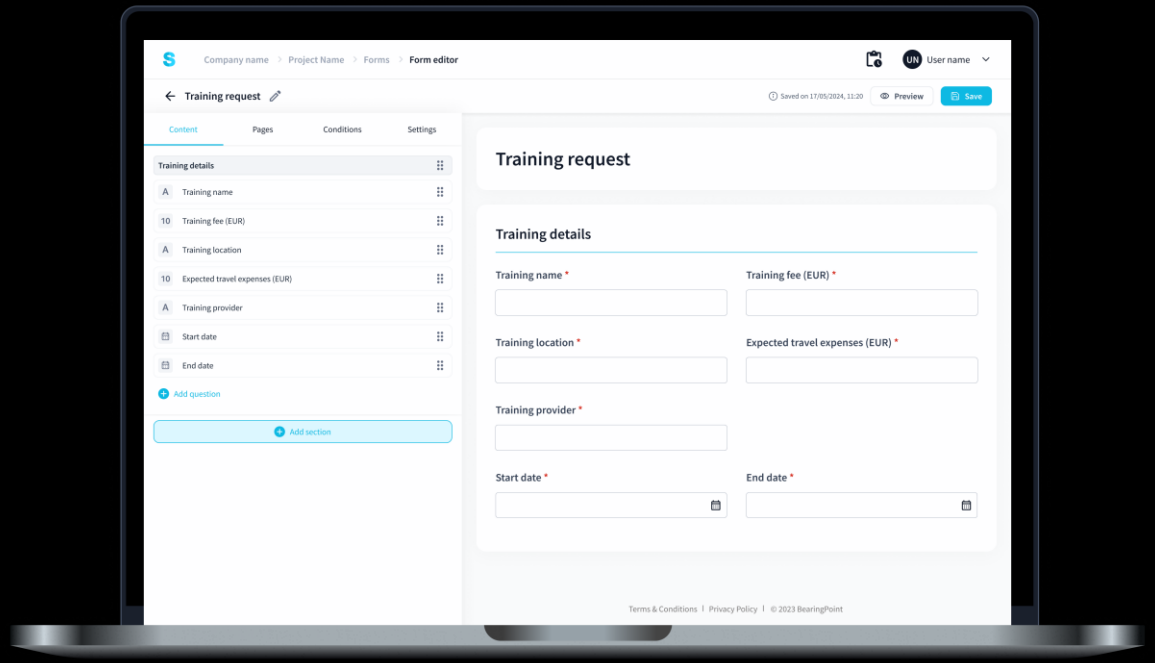
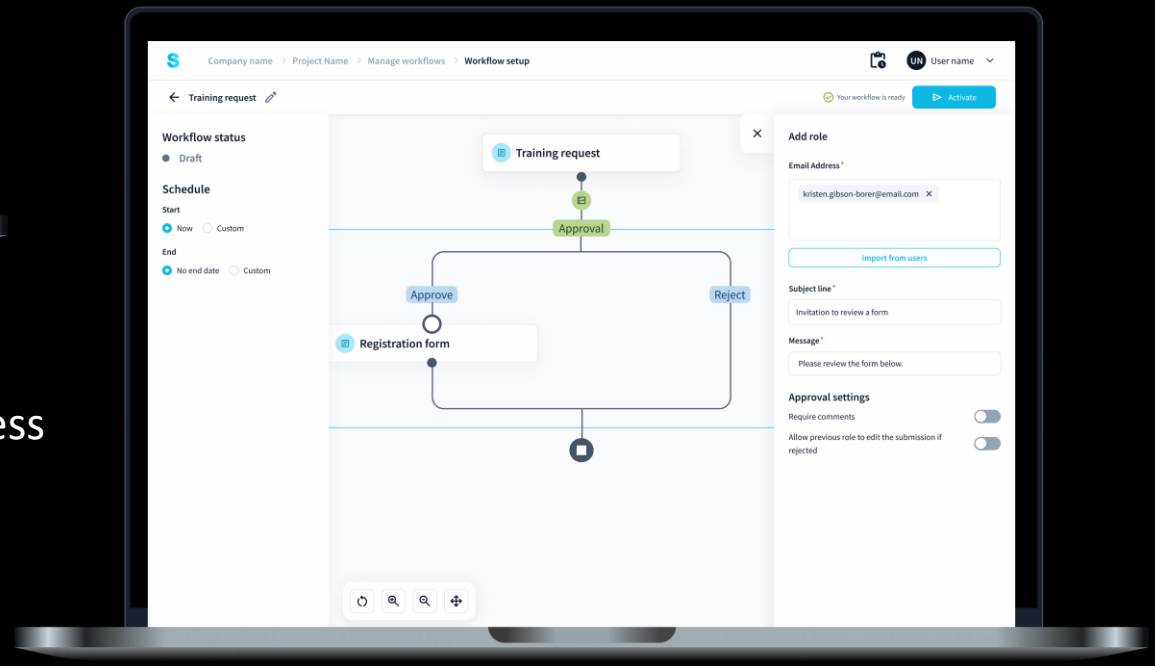
BearingPoint®

Our Approval Process – How it works



- Create and customize the forms according to your business needs.
- Use any desired input type.

- Create and customize workflows tailored to your specific needs.
- Define sequential steps, assign tasks to individuals or teams, set up deadlines, and establish the approval processes.



BearingPoint®

Key Benefits when using AI-enhanced approval workflows with Swarm

- Making the approval workflow process more efficient and reducing human error by up to 60%
- Unlimited possibilities in terms of accessibility, including for externals
- Gain additional insights, both qualitative and quantitative, for a holistic view, beyond time and budget constraints
- Receive accurate recommendations through AI, for better and faster decision making
- High flexibility to continuously refine requested information and who should contribute
- Can be connected to your existing systems seamlessly
