Direct Routing for Microsoft Teams

Three-week implementation service

Bell's unified communications (UC) professionals, certified on Microsoft Teams, are here to help your business integrate Microsoft Teams voice into Bell's SIP footprint to connect calls to the Public Switched Telephone Network (PSTN).

Bell leads the integration process with a collaborative approach and we take the time to understand your current infrastructure and properly assess your immediate and future business needs. Our certified Bell technicians will then implement a solution that is customized for your business needs and is in line with industry best practices.

Detailed agenda

- **Phase 1**: Discovery and Planning
- **Phase 2**: Deploy SBCs
- **Phase 3**: Configure Microsoft Teams within your Tenant
- **Phase 4**: Configure Pilot Users and Phone Devices
- **Phase 5**: Microsoft Teams User Migration
- **Phase 6**: Day 2 Support and Project Completion

This consultation is ideal for businesses who want to use an existing Session Border Controller (SBC) or new session border controller on premises for single or multiple UC environments.

Why Bell is better for Direct Routing

As one of the largest SIP Trunking network providers in Canada, Bell can provide you with the speed, performance and reliability you need.

We offer you more than 3,000 highly certified, technical specialists across various voice/UC and collaboration vendor portfolios.

Your solution will run over Canada's largest voice and data network, featuring more points of presence than any other provider.
