

Leveraging Document Intelligence in Dynamics 365

Azure AI Document Intelligence is an AI service that applies advanced machine learning to extract text, key-value pairs, tables, and structures from documents automatically and accurately.

It turns documents into usable data and shifts your focus to acting on information rather than compiling it.

The solution allows users to easily upload image or PDF files, label them, and leverage Azure Document Intelligence to create custom extraction models.

These models can then be used to automatically and accurately extract text and tables from documents.

Extracting and turning documents into usable data can be used to automatically create entity records and their associated sub-records, enhancing efficiency and accuracy in data processing tasks within Dynamics 365.
