

Impact Connects adopts Intune to protect corporate data and secure endpoints.

Impact Connects philosophy is simple; to be a valuable and trusted business partner who understands the “why” in order to provide the best results, not just the solutions requested. We will provide more insight than expected, better outcomes than hoped for, and we’ll build an environment with our clients that is a catalyst for growth, creativity, achievement, and loyalty.

As with many businesses, Impact Connects workforce accesses sensitive corporate information from locations both inside and outside of their corporate office. The challenge was to ensure that all employees could access the necessary corporate data from both corporate and personally

owned devices. It was essential to provide a secure and streamlined work environment and that any devices connecting to their network be healthy, user’s identity verified, and data loss protection be put in place to protect intellectual property.

Beyond Impact was able to design and implement the Microsoft Endpoint Manager (Intune) solution to provide, and in some cases, exceed Impact Connects requirements.

AT A GLANCE

Customer: Impact Connects

Website: <https://www.ImpactConnects.com>

Customer Size: 155 Employees

Country: United States, MN

Industry: Marketing

Products and Services: Data Analytics, Direct Marketing, Fulfillment, Critical Documents

Beyond Impact, Impact Connects, & Microsoft Endpoint Manager (Intune)

Customer Challenges

Impact Connects is in business to help you achieve your business objectives by serving as an extension of your marketing department, developing a thorough understanding of your business, providing thought-leadership and innovation, resulting in a profitable partnership grounded in trust, integrity, leadership and teamwork.

Impact Connects has recently seen their workforce accessing sensitive corporate network resources from many locations and from many different types of devices, both corporate and personally owned. Impact Connects needed to ensure that devices accessing corporate resources were indeed being accessed only by their employees and that these devices were in a health state. It was imperative that all corporate resources being accessed be protected from leakage and data loss.

Partner Solution

Beyond Impact was able to design and implement a tailored Microsoft Endpoint Manager (Intune) solution to provide, and in some cases, exceed Impact Connects requirements.

Beyond Impact designed and implemented Microsoft Endpoint Manager (Intune) based on the requirements needed by Impact Connects. Compliance policies and configuration profiles were put in place to ensure that only healthy Windows, Apple, Mac, and Android devices are allowed to connect. Data containerization was implemented for mobile devices to separate and corporate from personal data. Conditional access policies and multifactor authentication was implemented to verify user identity and to prevent risky sign-on activity. App protections policies and data loss prevention measures were put in place to protect sensitive corporate data.

Customer Benefits

Impact Connects now has the peace of mind knowing that the endpoints accessing their resources are healthy, their intellectual property is being protected, and that the users are indeed who they say they.

The Microsoft Intune features give an organizations unparalleled control over iOS, Android, and Windows 10 devices, create and enforce security policies, control access to corporate resources, and more

“The attention to detail and hands-on expertise that was provided by Beyond Impact made for a smooth and successful Intune implementation” – Mike, IT Manager

“The MEM solution with Intune is now providing the security and visibility we’ve been missing and helping the ensure our data is safe” – Mike, IT Manager
