BEYONDIT Portfolio: 5 Essential Apps for Business Central

Microsoft Dynamics 365 Business Central is a powerful ERP system, but certain functionalities can fall short of modern business needs. BEYONDIT addresses these gaps with a portfolio of apps designed to enhance and optimize key areas of Business Central. These apps simplify workflows, improve usability, and drive efficiency.

1. BeyondReports

Problem: The default printing options for documents such as sales quotes and invoices in Business Central are not visually appealing and require customization through RDLC or Word, which can be complex.

Solution: BeyondReports provides an intuitive configuration mask, allowing you to easily turn features on or off and tailor your printed documents to your needs. Create professional and well-structured documents without technical expertise.

2. BeyondCues

Problem: KPI cues in the Role Center are static and often do not align with your specific business needs.

Solution: BeyondCues allows you to create unlimited, customizable cues that display the KPIs that matter most to your business. Integrate these cues seamlessly into your daily workflows and Role Center to improve visibility and decision-making.

3. BeyondCloudConnector

Problem: Database storage within Business Central is expensive, and file management is limited.

Solution: BeyondCloudConnector enables you to drag and drop files directly into Business Central and link them to entities like master data or business documents. Files are stored securely in SharePoint Online, Azure Blob Storage, or Azure Files, reducing costs and centralizing your data.

4. BeyondInventoryApp

Problem: Managing warehouse operations on mobile devices is often unsupported in standard Business Central setups.

Solution: BeyondInventoryApp empowers your team with mobile scanning capabilities for fast and accurate inventory management. Manage your warehouse processes directly from mobile devices to enhance efficiency and accuracy.

5. BeyondBarcodes

Problem: Embedding barcode functionality into Business Central documents is complex and often requires additional tools.

Solution: BeyondBarcodes integrates powerful barcode functionality into Business Central effortlessly. Generate barcodes for sales quotes, order confirmations, and production orders to streamline workflows, enhance accuracy, and improve efficiency. Supports 15 barcode types, including QR codes.

Transform Your Business Central Experience

With BEYONDIT's portfolio of apps, you can overcome the limitations of Business Central and unlock its full potential. Simplify your workflows, save time, and drive efficiency with solutions designed to meet modern business demands.
