

Future-proof your data with **biGENIUS-X**

biGENIUS-X is a powerful cloud solution that helps you design, build, and maintain your analytical data platforms without the complexity and cost of traditional approaches.

Automated data transformation built for scale and complexity

- biGENIUS-X uses your existing, valuable data sources
- You can efficiently design and model your data with the low-code functionalities of biGENIUS-X
- biGENIUS-X generates the necessary code for deployment so that you can create your data solutions with a high-level of automation
- Build ready-to-use data warehouses, data lakes, data lakehouses, or data products without the burden of committing to a specific technology or vendor lock-in

Best-practice generator templates

biGENIUS-X incorporates best practices for your target environment from the get-go, helping you overcome the bottleneck of key team members with technical know-how, allowing you to get much more out of your team.

Metadata-driven approach

biGENIUS-X works independently from your data pipeline. Your metadata can be reused for different biGENIUS-X generators/technologies, future-proofing your investment by providing you with the choice of flexibility.

Modern graphical user interface

biGENIUS-X combines modern UI with dataflow & relationship visualization, allowing your team to efficiently model and rapidly deploy scalable, enterprise-grade BI solutions.

Automation & much more

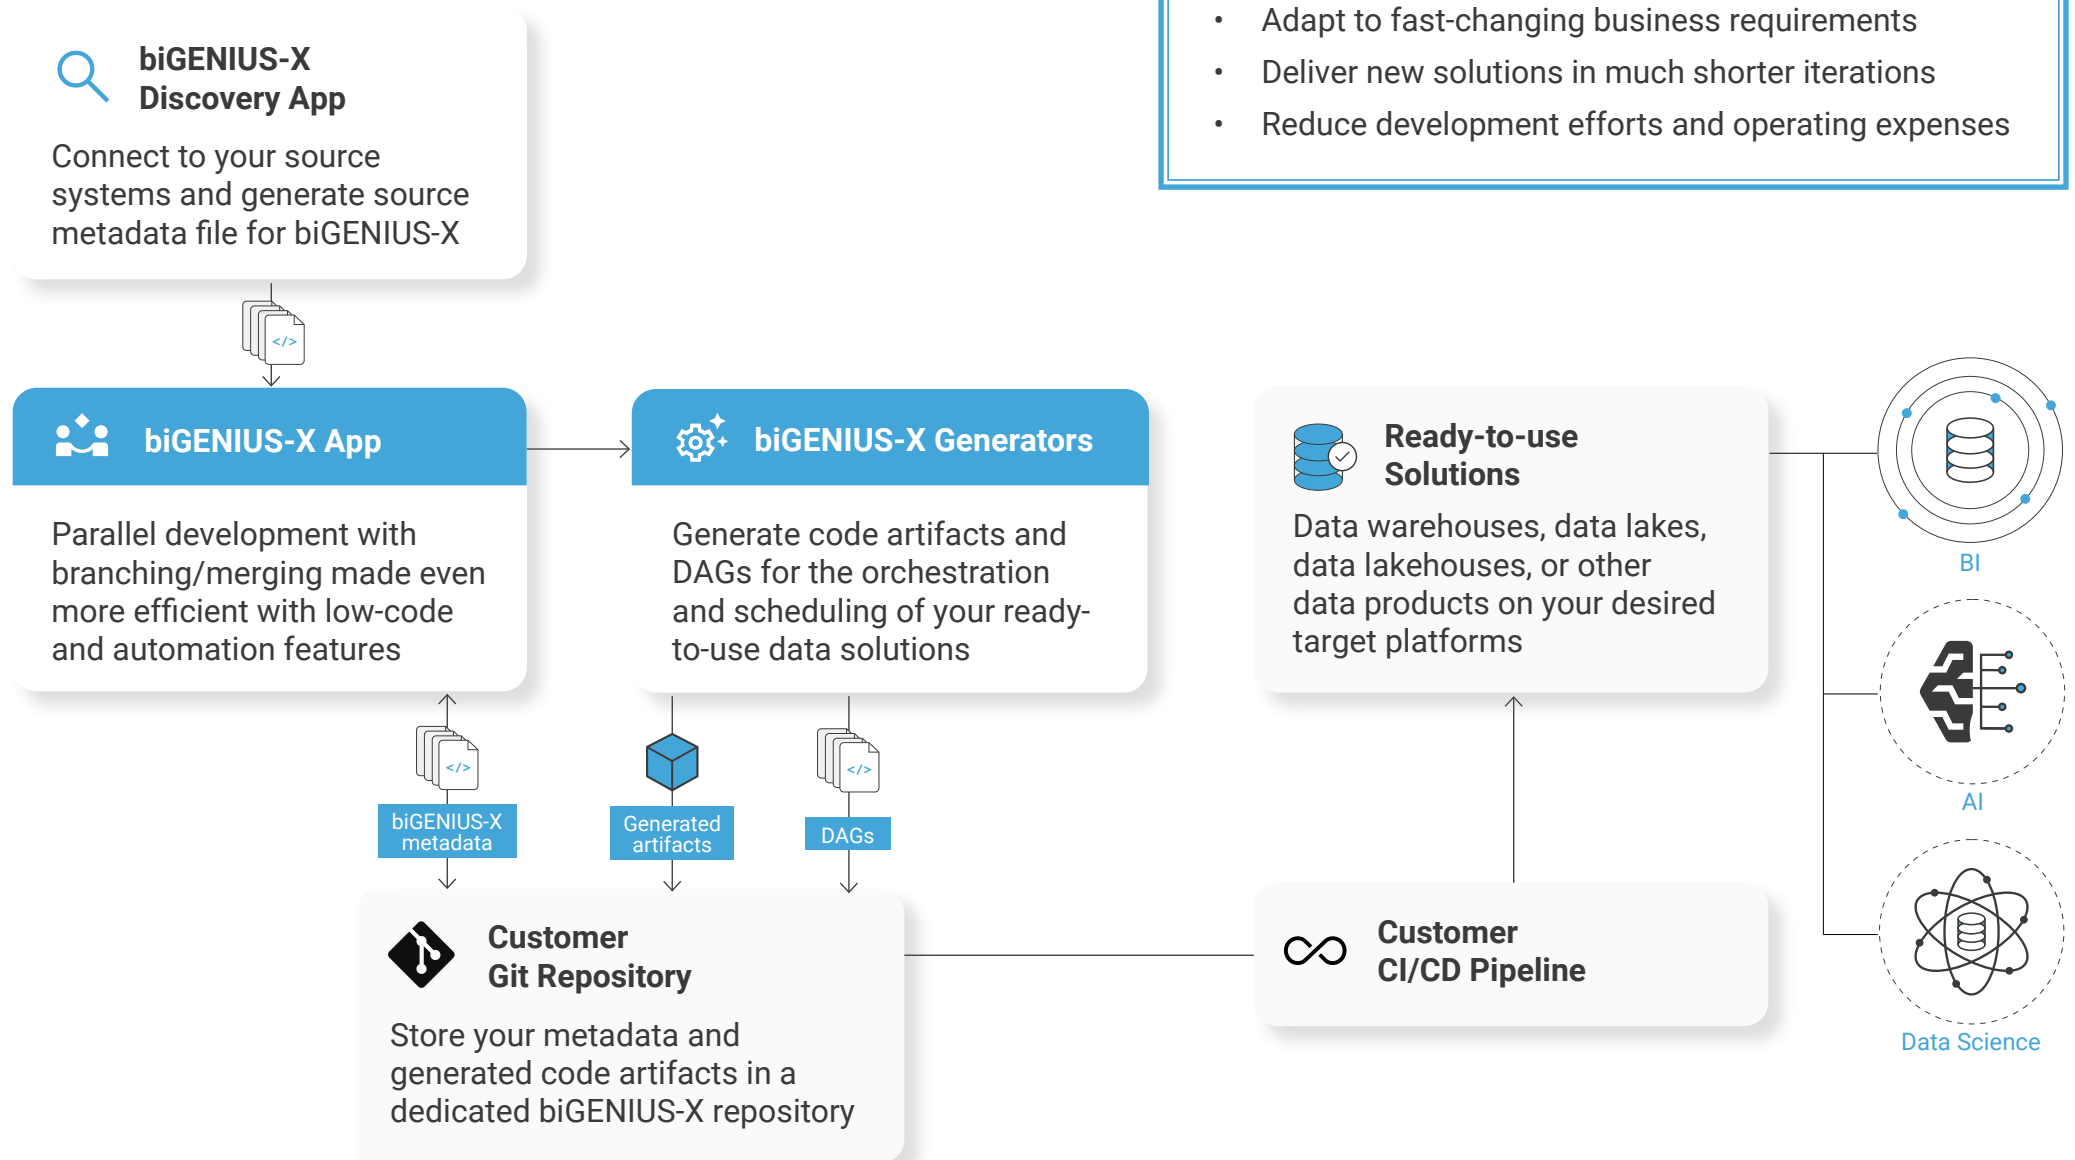

biGENIUS-X integrates with tools your team is familiar with and is optimized for productivity and collaboration. With its low-code features such as the modeling wizards, repetitive tasks are minimized.

biGENIUS-X

SOLUTION ARCHITECTURE

Automated data transformation vs. traditional methods

- Adapt to fast-changing business requirements
- Deliver new solutions in much shorter iterations
- Reduce development efforts and operating expenses

biGENIUS-X

USE CASES

Accelerate your data development lifecycle from the ground up

Easily build modern data solutions from scratch or rearchitect existing solutions in record time by eliminating manual efforts and automating tasks from start to finish.

Adapt to new technologies hassle-free

biGENIUS-X is able to work with virtually any existing and new technologies, giving you more flexibility

Keep expenses low when complexity of data grows

Get more done with fewer resources with biGENIUS-X from the building to the maintenance of data solutions

Build & automate ready-to-use BI solutions

biGENIUS-X significantly reduces manual development and risks of human error

Rapid prototyping

Bring your concepts to reality and create MVPs in record time with biGENIUS-X

Improve data team efficiency

biGENIUS-X provides a feature-rich workspace optimized for simplified and collaborative data engineering
