Image **Auditor**

Are you exposed to the risk of litigation action and scandal due to inappropriate / illegal images stored on your networks infrastructure?

Scandals caused by **inappropriate / illegal images** stored on your network and the possible ensuing litigation actions can have a devastating impact on reputations.

However, the challenge of measuring risk and compliance with XXXX on a data surface that double approximately every 2 years would seem almost **impossible**.

Image auditor is a network based scanning software solution, which discovers, remediates and reports on inappropriate and potentially illegal images at rest, **centrally** from one pane of glass. **The solution is agentless** and requires no additional hardware or software.

GOVERNMENT STAFF WATCHING PORN

REPORTS

Delete
Quarantine
Encrypt

Non intrusive scanning means scan take plane unbeknown to end users.

Discovered data can be reviewed, permanently deleted or encrypted and placed in quarantine centrally from **one pane of glass.**

COUNTY COUNCIL

MEETING ROOM
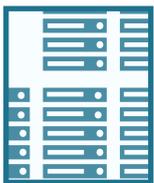

The solution empowers county councils and government bodies to efficiently and centrally mitigate exposure to litigation action / scandal, measure risk and policy effectiveness and protect their reputation.

Image Auditor helps determine the **location and ownership** of inappropriate and potentially illegal images enterprise wide across network resources such as PC's, laptops, file servers, emails etc. Audited images are **centrally presented** in a ranked manner and are managed through the case management interface for reporting and or removal. A full audit trail is created.

Achieve your goal

Demonstrate status of inappropriate image usage enterprise wide and if it came from within or outside of your network.

Measure use / corporate responsibility policy effectiveness and uptake.

Satisfy **HR processes** and policies.

Reduce risk and damage to public opinion.

Conduct regulars scans and reports.
